

## Cochran Charged With Assault

### Arrested for Protecting His Own Property

Walter Cochran, well known mellow grower of the Juliaetta district, was given a preliminary hearing upon a charge of assault with a deadly weapon Wednesday afternoon in the Latah county probate court before Judge Adrian Nelson, the charge growing out of the shooting of 17-year-old Ira Fuson with a shotgun Saturday, August 9, says the Star-Mirror.

Both the state and the defense presented three witnesses during the hearing Wednesday afternoon, the testimony bringing out the fact that seven young people, including young Fuson, discussed and agreed the day before to seek some watermelons Saturday evening, and at the time they left Pine Grove district near Genesee where they reside, going to Juliaetta where one of the party knew of a mellow patch, so he said.

The party of seven divided into two groups, four, including Fuson, going into one part of the patch, and the remaining three into another. The three were found by Mr. Cochran, and the other four, becoming frightened, started to run, at which juncture Cochran fired a shot at Fuson with a shotgun which he carried, the shot entering near the shoulder blade. Testimony brought out that 138 shot marks were on his body, and that eight lodged in a belt he was wearing.

The three members of the party which Cochran held, were taken to Juliaetta and \$15 demanded of them, even though the young people testified they took nor destroyed no mellons. One of the party, a girl, left a wrist watch as security of the payment of the sum, which was returned after criminal charges had been preferred against Cochran.

Cochran is being held under bond to appear before the district court to answer the charges, under which punishment of not more than two years in the state penitentiary or a fine of not to exceed \$5000, or both, can be meted out if a verdict of guilty is found.

### Oppose Butter Substitutes

The Idaho Farmer is making a laudable fight for the passage of legislation in this state prohibiting the sale of butter substitutes. Washington and Oregon are endeavoring to do away with the butter substitutes in those states with every indication of success.

The only reason to doubt its success in Idaho is the evident reluctance of our legislature to put thru any legislation for the benefit of the farmer.

It has been the general sentiment all over the state to make a dairy state of Idaho. Farmers have been urged to turn their attention along this line on account of the promising field that the dairy industry presents. In the face of this condition it hardly seems good business to injure the industry in Idaho by shipping in butter substitutes to beat down the price during the winter months when production costs are high. If the Idaho Farmer succeeds in eliminating the butter substitutes it will have done a big work for the dairyman of Idaho.

### Buying With Foresight

A darkey, being the father of twelve children, all of whom had been rocked in the same cradle, was putting the latest arrival to sleep.

"Kastus," said his wife, "Dat cradle am 'bout worn out."

"'Tis 'bout gone," replied Kastus, "You all bettan get 'nother, and get a good one—one dat'll last."

### First Load New Beans

Charles Schultz of Cameron delivered the first load of newly threshed beans to Kendrick, Tuesday of this week. The beans were threshed by a brand new Case machine, recently purchased by the Wegners and Schultz Bros. of Cameron. The beans graded extra good which indicates that the new machine is doing a good job of threshing. Mr. Schultz' beans averaged about 4 sacks to the acre.

## Latah County News Paragraphs

### Items of Interest Taken From Neighboring Papers

Now we don't want to start an argument, but we think the great-grandfather of the car mentioned by the Gazette is standing at the Deary Garage right now. This is a Chase model, with high wheels and chain drive and it was running up to 1921, when it was laid aside for a new model. It has a three cylinder engine and four old-fashioned leaf springs. The date of its make cannot be ascertained but from what we can read about motor cars it must have been among the first to appear after the internal combustion engine had been perfected. That would bring it early in 1900 or the late 90s. The venerable bus belongs to H. B. Shove of Park.—Deary Press.

Frank Jones went to Clarkston Monday morning, taking with him his three cougars that he caught in the Priest lake country last winter. Frank said he expected to sell them to the manager of the Clarkston zoo, at the car barns.

Mr. Jones is one of the best-known and most successful cougar hunters in the Northwest and brings in a lot of pelts every winter.—Genesee News.

### Hubert Sparber

A sad death occurred when Hubert Sparber passed away at the home of his grandparents, Mr. and Mrs. H. H. Sparber, who live near Kendrick. Death was due to typhoid fever, following an illness of over three weeks.

Hubert Sparber was born at Lethbridge, Alberta, October 25, 1912. He died at 6:30 o'clock Monday evening, September 8. His mother died when he was but a few days old, so he and his two brothers and a sister, made their home with their grandparents.

Hubert is survived by his father, who lives at Centralia, Wash., two brothers, Walter and Orville, a sister, Erma, besides other relatives.

Funeral services were held at the Methodist church, Wednesday afternoon at 1:30. Rev. Rein of Cameron had charge of the service both at the church and at the Kendrick cemetery where interment was made.

### Snake Beads.

Beads made out of a snake's back are the latest. The rush for beads has brot out a new method of obtaining them. Kill a snake, place it in a kettle, boil the meat off. Taking the backbone, polish the separate bones, then string them together. It is said the bones make a very pretty necklace. One woman when she heard of snake beads, said she never cared much for beads anyway.

### Too Talkative.

A summer, moonlit night, with Hilda's head on his shoulder, made it easy for Ole to propose—in fact, too easy. He was promptly accepted then followed a long ominous silence. "Why don't you say something, Ole?" at last ventured Hilda when she could stand it no longer. "Ay tank ay say too much already," spoke up Ole in a husky voice, aroused out of deep thought.—Ex.

## Spillman Here Friday, Sept. 26

### Will Speak to Farmers on Agricultural Topics

Dr. W. J. Spillman of the U. S. Department of Agriculture, who is to visit Kendrick, Friday, September 26, recently outlined some of the matters of which he will treat when he speaks here. He is quoted as saying:

"I am getting more and more interested in this trip. I am outlining a number of talks on the principle of farm enterprises of this region, my object being to give the farmers some idea of what they may expect as to the future of these enterprises and the desirability of their engaging in them.

"On August 15, the department of agriculture issued a report on farmers' intentions as to the acreage of winter wheat and rye to be sown this fall. Reports received from 19,000 farmers indicate that according to present intentions of farmers the acreage of winter wheat to be sown this fall is 7 1/2 percent greater than that sown last fall, and 27.8 percent greater than the average annual fall sowing from 1909 to 1913. Presumably this increase is due to the fact that the price of wheat has recently gone up somewhat because of a shortage in the Canadian crop. This indicates the difficulty of adjusting the acreage of a farm crop to the demand for its products.

"One of things needed in the Pacific northwest is a large increase in manufacturing industries. This would make a market for more farm products. I hope to be able to discuss this subject in more or less detail in some of the talks I give out there. I can see no reason why industries based upon the natural products of that country should not succeed."

### Miss Agnes Cox Married

Miss Agnes Cox, one of the most popular and accomplished young ladies of the Potlatch country, was married last Saturday at Moscow. She is the daughter of Mr. and Mrs. Wm. Cox of American ridge. During her school life at the University of Idaho she made a brilliant record which has been a source of pride to her many friends in this community. The Gazette joins with her friends in wishing her all happiness. The following account of the wedding was published in the Star-Mirror:

Agnes Cox of American ridge and Harold R. Telford, of Coeur d'Alene, two prominent University of Idaho graduates here this last June, were married Saturday morning by Rev. Wayne S. Snoddy, at the Presbyterian parsonage in the presence of relatives and a few intimate friends. Mr. and Mrs. William Cox, parents of the bride, and a sister, Margaret, attended the ceremony.

Mr. Telford was prominent in university athletic circles during his university career, captaining the Vandal quintet last season and playing three years at guard on the Idaho team which captured both the Pacific Coast and Northwest conference pennants for two successive seasons. He was a member of Phi Delta Theta fraternity, and held several student body offices, including the presidency of his senior class during last year.

Miss Cox was a member of Gamma Phi Beta sorority, and was chosen May queen this spring. Last year she acted as secretary for the Associated Student organization, and was a member of Mortar Board, national honorary women's society. She has been working this summer in the registrar's office at the university.

The couple will make their home at Coeur d'Alene.

## Commercial Club Elects Officers

### Held Meeting at Commercial Hotel Tuesday

The Kendrick Commercial Club resumed regular meetings last Tuesday night after the summer vacation period. As there was no meeting held last June, the regular time for election of officers, the election was held Tuesday night.

Reports of standing committees were heard and the regular routine business transacted. Arrangements were made for the Spillman lecture, which will take place here September 26.

The newly elected officers follow: President, A. Wilmot; vice president, N. E. Walker; secretary, Dr. McKeever; treasurer, Hugh Stanton. Finance committee: Jody Long, R. D. Newton and W. M. McCrea.

A committee of five was appointed by chairman Wilmot to make arrangements to put on three big sales days, probably September 25, 26 and 27. More information along this line will be published next week.

The Club will meet every second Tuesday evening of the month.

### Eastern Stars Meet

Canyon chapter No. 67, O. E. S., of Kendrick, at its meeting Tuesday evening entertained visitors from Laurel chapter No. 13, of Lewiston, and Ruby chapter No. 9, of Moscow, a large delegation being present, among them the following past and present officers from Laurel chapter:

Ella M. Freeborn, past grand matron; Susan A. Needham, past grand matron; Daniel Needham, past grand patron; Edith Paulsen, past worthy matron; Katherine McCormick worthy matron; Larua E. Bristol associate matron; Walter Paulsen, past worthy patron; Catherine Devore, associate conductress.

From Purity Lodge No. 9, Theodosia Baker, worthy matron; Edna Hiskhorn, past worthy matron.

At the banquet George E. Knepper presided as toastmaster, and two or three hours were occupied with interesting and instructive talks.

At midnight the guests departed all declaring they had had a delightful as well as a profitable evening.

### That Smutless Wheat

An article concerning smutless wheat grown near Craigmont by Mr. Warnacutt, was republished in the Gazette from the Lewiston Tribune some time ago. The article was brought to the attention of Dr. E. F. Gaines, cerealist of the Washington Experiment Station. He gives the following interesting information in a letter regarding this wheat:

"This Selection C, as we call the wheat that Mr. Warnacutt had been growing the last three years, has been tested side by side with Ridget since the cross was first made. It was inferior in every respect. It yields less, it shatters worse, has weaker straw, and it has a lighter bushel weight. I believe you would be doing the citizens of Idaho a good turn to warn them against stocking up with this variety when they can get Ridget in quantity by next year or the year following."

He had just comfortably settled himself in the parlor with his arms around his sweetheart when her little brother came in to the room, sat down. "Here's a dime," he said to the boy, "get yourself some candy." "Don't want any candy," retorted the brother. "Then here's a quarter, chase yourself." "Don't want a quarter either." "Well, then, here's a dollar, go to the show." "Don't want to go to the show." "Well, what do you want?" "I want to watch."—Everybodys Magazine.

### To Cedar Creek on High

A. W. Longfellow, pioneer saw-mill man of the Cedar Creek section, established a record last week that had previously never been equalled. He drove his Samson truck from Kendrick to Lindon without shifting gears. This doesn't mean that he has the best pulling truck in the country but he went over the newly constructed Cedar Creek grade and pulled it all on high gear.

## Kendrick News 20 Years Ago

### Item Taken from the Gazette Published in 1904

George Davidson went to Moscow, Tuesday, where he entered the Sophomore class at the state university. He is taking the civil engineering course.

The family of Frank Crocker arrived from Everett the first of the week and will make their future home here, not liking the coast as well as they thought they would when they removed there a couple of years ago. Mr. Crocker has not yet returned but will be here within a few days. They will make their home with J. S. Crocker on Cedar Creek until they can make arrangements for a home in Kendrick.

J. R. Hepler of Juliaetta was here Wednesday looking over the town and noting the building operations.

Frank Byrne was a visitor in Lewiston this week. He leaves next Tuesday for quite an extended visit in St. Louis, Iowa and South Dakota, in all of which places he has many friends and acquaintances. He will be gone about three months.

Miss McCrea of Spokane, a niece of D. S. and Walter McCrea has been visiting at the home of the latter for the past few weeks. Miss McCrea spent part of the summer here two years ago.

Mrs. Fred Breyman of the Hawaiian Islands is expected here soon for a visit with her mother, Mrs. Sarah Crow.

D. S. Hunter has just received a carload of flooring and ceiling and other desired lumber. This is the best of sound lumber.

### Appoint Methodist Pastor

Rev. Bell of Moscow has been appointed to take charge of the Methodist church here. Rev. Poolton, who has been the local pastor for the past two years, has been appointed to the Oakesdale church. He and his family will move to their new field at an early date.

Rev. Bell was pastor of the Kendrick church about 20 years ago. He built the parsonage during his residence here. He will make Kendrick his home, although Mrs. Bell will be in Moscow a part of the time, where their children are attending the university.

Miss Joy Bell has been regularly appointed as pastor of the Southwick church. She and her father will have charge of the Kendrick, Southwick, American ridge and Peck churches. Mr. Bell expects to hold three services a day, every Sunday, in various parts of his territory. He is particularly desirous that a big congregation is present at the first service here Sunday morning at the regular hour. He will also hold an evening service here.

Mr. and Mrs. Bell had rather a novel experience while attending conference at Wenatchee last week. They were driving to church one evening in their Dodge car, when a bullet struck the windshield and passed between them. Bits of glass flew in their laps, and a round hole was left in the windshield but the occupants of the car were uninjured. It was impossible to find a clew as to the person who fired the shot.

## Burn Separator Near Cavendish

### Two Men from Teakean are Charged with Arson

The threshing machine under contract of sale from Frank Vaughn to David Daniels was destroyed by fire Thursday evening, says the Tribune. The fire was discovered after the crew had reached the house for supper.

The machine was used for threshing beans and the fire is charged to incendiarism. A can of oil left with the engine was found near the scene of the burning thresher and members of the crew stated there was no opportunity for the fire to have started from the bean straw or otherwise accidentally. The loss is about \$1,800 and no insurance was carried.

Warrants charging arson in the second degree were issued Monday for the arrest of Fred Choate and Ernest Swenson, residents of the Teakean section. The complaint was made by Dave Daniels, who charged Choate and Swenson with setting the machine on fire. Both men were arrested and taken to Lewiston by Deputy Sheriff Charles Monroe.

Ernest Swenson took the witness stand Wednesday in the preliminary examination directed against himself and Choate, and confessed participating in setting fire to the machine.

Swenson and Choate were held to the district court for trial and their bonds were fixed at \$10,000 each. Choate is at Liberty on a continuing bond furnished by his father and brother and Swenson is held in the county jail.

According to the testimony of Swenson, he has been employed at the Choate place and last Thursday evening Choate told him they would take a ride in the car. Swenson testified he drove to a point near the Daniels bean thresher and there left the car and walked across the field to the machine. He testified Choate had not discussed burning the machine, but after they reached the machine Choate said he would stand around a minute and see if anyone was in sight. He testified Choate then picked up an armful of bean straw, pushed it into the carrier of the machine and lighted it with a match. Swenson testified they then returned to the automobile, drove home by another route and in the morning changed the tires on the auto.

### Railroad Crossing Accident

Fred Crocker had a narrow escape from serious injury last Friday at the railroad crossing near the Bear Creek bridge in Kendrick. He was driving a four horse team to make his daily trip to Cedar Creek mills after a load of lumber. Just as his leaders got on the track a train hove in sight a few yards away. The horses "jackknifed" and got off the track in time to escape being run over, but one horse had one hoof torn loose, another was stifled and a third badly cut. The tongue was broken out of the wagon. Mr. Crocker was thrown out of the wagon and one hind wheel passed over his legs. Aside from being somewhat bruised he was not seriously injured.

The crossing is a very dangerous one as it is impossible to see up the track, when traveling east, unless one is within a few feet of the rails.

Mr. Crocker stated that he did not hear the train whistle nor could he hear the bell ringing, so that the accident was unavoidable on his part. It would not be possible for him to see up the track until after his wheel horses had started to cross. As it was, the train came in sight around the point of rocks near the crossing, just as the leaders were on the track. It is fortunate that the accident was not a more serious one.

"The Home of Good Things to Eat and Wear"

Many large industrial concerns throughout the United States owe their success to some conservative policy adopted and strictly followed out.

Every farmer should adopt this policy. How many acres of land on your farm are unproductive that could be made useful? For example, some farms have an old fence that serves no useful purpose but which occupies valuable space. An isolated tree here and there that could easily be removed and an overhanging hedge-fence which takes up space that could be used.

By adopting conservative methods in this as well as other lines you can increase your total production with practically the same amount of time and expense.

Isn't it worth thinking about?

Start a checking account with us this fall. No accounts too large and none too small.

### Garget Often Is Cause of Great Loss in Herd

Garget often causes considerable loss in the herd. When an animal is found to be suffering from this trouble she should not be milked till the last as the disease may be carried on the hands. After milking the hands should be washed with a good disinfectant. Milk from the diseased quarters should not be milked on the floor but milked into a pail and disposed of. Cows suffering from it may be treated with the following mixture: Mix eight ounces of a good lubricant, eight ounces of wool fat, two

fluid ounces belladonna, two nut ounces extract pokeroor. Warm and mix. Massage udder thoroughly. Feed one tablespoonful of powdered pokeroor and one tablespoonful of saltpetre three feeds, stop three feeds and continue again if necessary. Diseased cows should be isolated from the rest of the herd.

### To Mend Pots Quickly

If you have a pot with a pin-hole leak take the protruding end of an old snap fastener, push it through the hole and hammer it flat on the other side and it will lengthen the life of your pot or pan.

## PRACTICAL HINTS ON MARKETING TURKEYS

(Prepared by the United States Department of Agriculture.)  
Turkey time's a-coming! If you want top prices for your birds, here's a few tips from the United States Department of Agriculture:

Range fattening is more satisfactory than pen fattening, the department says. Begin fattening about three weeks or a month before marketing, and proceed gradually by feeding lightly on corn in the morning and again in the evening, a short time before the turkeys go to roost. Increase the quantity of corn fed gradually until the birds are getting all they will eat. Be careful not to feed new corn too heavily until the turkeys have become accustomed to it, to prevent digestive troubles.

Good-sized, well-matured birds in good condition for fattening can often be marketed to best advantage at Thanksgiving. Small, immature turkeys should be held until Christmas, for further fattening, but if the birds are unthrifty market them at once. Sales outlets to raisers within express shipping distance of good markets are local consumers, local buyers and dealers, more distant buyers or dealers and car-lot shippers, and receivers or commission merchants of live or dressed poultry in large cities. To determine the best available outlet study shipping charges and keep in touch with both local and distant buyers as to price. Distant buyers will mail quotations on request.

Most producers market their turkeys alive. Shipping dressed turkeys to markets is justified only when making local sales or there is an unusually favorable outlet for the dressed product. Shipping coops should be high enough to enable the birds to stand up. A coop 3 feet long, 2 feet wide and 20 inches high will accommodate five or six turkeys. Overcrowding may result in bruising, which detracts from the market value; overcrowding may also cause death and complete loss.

If the birds are on the road only a few hours, do not feed before shipping. If they are on the road a longer time water and feed liberally to prevent shrinkage in weight. Ship in time to place the turkeys on the market a day or two before the holiday. Late arrivals may reach an overstocked market, and arrival after the holiday usually means lower prices.

Killing and dressing birds is simple when properly done. Hang up the turkeys by their legs and, with a single stroke, push the point of a sharp knife up through the roof of the mouth into the brain. When properly done, this operation paralyzes the bird and loosens the feathers so that they come out easily. Then sever the veins in the throat just beyond the skull for bleeding. The turkey should be dry-picked, and plucked clean. Thoroughly cool the carcass after plucking, inasmuch as failure to remove all animal heat promptly will result in early spoilage. Cool either by hanging outdoors, if the temperature is between 30 and 45 degrees, or by immersing in cold running spring water or ice water.

When thoroughly chilled, the carcasses are ready for shipment. A barrel is a convenient shipping container. Place a layer of cracked ice in the bottom of the barrel, then a layer of turkeys, followed alternately by layers of ice and turkeys, and topped off with a layer of ice. Tack burlap over the top of the barrel.

If you are building up a permanent turkey business be sure to retain as many of the finest, largest, quickest-growing young birds needed to rear the next year's flock, and send the rest to market.

### Poultry Facts

Continue to cull your flock.

Caponize all late cockerels.

An abundance of shade is a help in keeping the birds thrifty.

Hens cannot produce eggs without raw materials for their making. Feed 'em well, summer as well as winter.

Avoid the thin crow-headed pullets which are rather listless and generally lacking in pep.

Retain the pullets that feather early and have plump meaty bodies. The active singing birds with good marking for their breed are the kind to save.

Provide the goslings with free range, plenty of good shade and green grass to eat. Feed a mash of fine ground grains. Also be sure that they can get plenty of grit.

A double range is often a help where the pullets are developed. Then corn and sunflowers can be planted in the spring and the birds given the range when the plants are about a foot high.

Guineas are subject to lice like all other fowl. These pests are found on the head and about the vent as in chickens, and also between the quill feathers of the wings as in turkeys. Sodium fluoride will rid them of the lice, but it is well to use a little salty grease along the base of the quill feathers as well as the powder.

# DAIRY FACTS

## CAREFULLY SELECT DAIRY HERD SIRES

Ninety-five per cent of the men who buy herd sires wait until they need one, then rush out to buy one ready for service. They don't know it, but they are following beaten paths. The successful breeder selects his herd sire when the general demand is lightest. As a result he gets a better bull at a lower price, says J. P. LaMaster, chief of the dairy division at Clemson college.

Some people have potatoes to sell in the seasons when potatoes are high in price. Some people have real estate to sell when the demand is greatest. But the ordinary man has potatoes to sell when prices are low, and is burdened with real estate because he can't sell it. The reason is that the ordinary man follows the beaten path. The other fellow finds out what people are doing generally and he does something else. He puts in more potatoes after a year when they don't sell, simply because he knows most of the others won't do that. He buys real estate just when almost everybody else wants to get rid of his; and he buys a herd sire during the season when demand is lowest.

This is practically all the difference between "just ordinary existing" and getting ahead. You can find out to which class you belong by asking yourself this set of questions:

When will I need a new herd sire? Let us suppose you will need a new one before next March.

When will I look up a herd sire? (If your answer is, "Oh, next fall when I'm not so busy," you belong to the "beaten-path gang." You will start out just when 95 per cent of the breeders start, you will buy one of the "left over" bulls-and you will pay all the bull is worth.)

Now you have your choice between a great many good bulls. All these will be gone before fall to the successful 5 per cent. If you say, "I'm too busy now," you are following beaten paths. If you sit down this very day and line up your next herd sire, you can depend upon it, you will buy a better one than the luckiest member of the "beaten-path gang" will ever see.

### Care and Attention Is

#### Essential for Ringworm

The following is reported as a good cure for calves with ringworm: Wash the parts with strong soap and water to remove as much as possible of the crusts or scabs and, when dry, rub the spots with some of the following ointment: Flowers of sulphur, two ounces; oil of creosote, two drams; prepared lard, four ounces. This ointment should be applied each morning and evening. Painting the affected parts with tincture of iodine on alternate days is also very effective, but this agent should not be applied near the animal's eyes. The woodwork and the walls of the shed in which these calves are housed should be painted with hot lime wash, to which has been added a couple of ounces of crude carbolic acid. With a little care and attention one should soon get rid of the trouble.

### Easiest Way to Dehorn

#### Is by Applying Caustic

The easiest and most really painless way to dehorn is to use caustic potash on the young calves. This caustic, should be applied on the buttons where the horns come out by the time the calves are a week old. The hair should be cut around the buttons and the skin around the horns rubbed with vaseline to prevent the caustic from burning. The stick of caustic is wrapped with paper to prevent it from eating the fingers, one end of the stick is moistened in water and rubbed on the horns until they become white. The caustic should not be wet enough so it will run down on the calf's head or into its eyes. This treatment will kill the horns, stopping further growth.

### Clean Vessels and Warm

#### Milk of Big Importance

A good rule to go by is never to feed a calf out of a pail you would not drink out of yourself or feed her any milk you would not be willing to drink. Feed the milk as warm as fresh milk from a cow. Keep the pens dry after calf has had her milk. After the heifer is weaned then it is well to put some oil meal into the grain mixture. A good mixture much used is:

200 pounds wheat bran.  
300 pounds cornmeal.  
200 pounds ground oats.  
100 pounds oil meal.

This is particularly desirable to use after weaning.

### Cause of Bad Flavors

Bad flavors in cream and dairy products are usually caused by carelessness in the care of the milk. If a little dirt falls in the milk it becomes contaminated with bacteria which gives it bad flavors and if the milk is allowed to stand around the barn awhile before taken to the house and cooled it will often take on a bad flavor. The feeding of some sort of succulent feed will often help to overcome this; roots, cabbage, and slugs are good.

## Returns in 1923 Slightly Better

\$1,020 Average Return Made for Use of \$17,400 Capital and Labor.

(Prepared by the United States Department of Agriculture.)

An average cash balance of \$800 was returned to owner-operators in 1923 on 16,183 farms surveyed by the United States Department of Agriculture. In addition to this margin of cash receipts over cash expenses these farms increased inventories of crops, live stock, machinery and supplies \$180, making an average return of \$1,020 for the use of \$17,400 of capital and the labor of the farmer and his family. These farms also produced food and fuel consumed on the farm estimated to be worth \$250 on the average.

### Better Than in 1922.

This is slightly better than shown by a similar survey for 1922 on 6,004 owner-operator farms which averaged a cash balance of \$715, increased inventory of \$202, and produced food and fuel worth \$294 on capital amounting to \$16,410.

The cash balance of \$890 in 1923 was all the average of these farms made available to the owner to pay his living expenses, take care of debts, and make improvements. Interest paid on debts during the year 1923 averaged \$230 and the reported outlay for improvements averaged \$140.

Sales of crops in 1923 on the average totaled \$850 or 38 per cent of total cash receipts of \$2,240. Sales of live stock or live stock products were \$1,310 or 58 per cent of the total receipts. Miscellaneous receipts were \$80.

Cash expenses amounted to \$1,350, which included hired labor worth \$350 for the year, live stock, \$240, feed \$210, fertilizer \$80, seed \$40, taxes \$190, machinery \$110, and miscellaneous \$150.

### Size and Value.

The size of the farms was 300 acres on the average and the reported value of land and buildings was \$14,580, the size and value of the farms being larger than the average reported in the 1920 census. The value of crops, live stock, machinery and supplies on hand at the beginning of the year was \$2,900. The acreage of the farms reporting in 1922 was 252 acres and the average capital \$16,410.

The department points out that the figures apply only to the farms reporting and to the farm business in each year. Many farmers have property besides the farms they work, or supplemented their farm returns with outside work, and many drew on savings or borrowed to meet expenses not covered by current receipts. It is probable, however, that the figures give a fairly accurate picture of the state of the business of owner-operators in the years covered by the surveys, the department says.

## Some of Big Essentials for Sweet Clover Hay

There are farmers who follow the practice of cutting sweet clover hay with a binder and cure it in long shocks. The farmers who follow this practice seem to agree that the method is a good one. The practice is when dry to put it in the barn or to stack it in round stacks like grain. The advantages claimed for this method are that it saves the leaves and that the labor saved is a much bigger item than the cost of twine. Also, with the binder, it is easy to get the high stubble that is necessary if one is not to kill the plants.

For farmers who do not have a lot of corn or potato cultivating to do, it is probably preferable to cut the sweet clover hay with a mower at about the same date that the first cutting of alfalfa would come. It should be raked as soon as wilted. If the acreage is small and labor is available, it may be put in cocks and hauled to the barn when dry. If the hay loaded is to be used, it should be turned into windrows with a side delivery rake as soon as wilted so as to save the leaves.

In any case, keep in mind that the essential for good sweet clover hay is to get it into windrows or cocks as soon as wilted so that the leaves may be preserved. The same care in handling so as to save leaves is of almost equal importance with ordinary red or alsike clover and alfalfa as with sweet clover. If a mower is used some device is necessary for raising the cutting bar if one is to avoid killing the plants.

### Sweet Clover for Seed

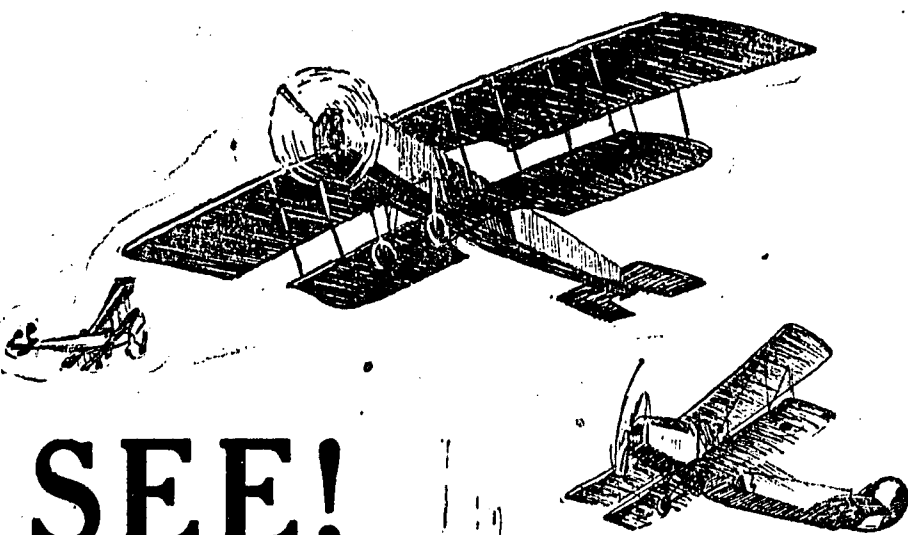

#### Can Be Clipped for Hay

Where second year sweet clover is to be cut for seed it should be clipped for hay or pastured the first part of the season or otherwise the growth will be so tall that it will be very hard to handle, suggests the Nebraska Agricultural college. Unless this is done, the growth, especially of the white blossom sweet clover, is very likely to be so heavy that a binder will not handle it.

Where it is clipped unless it is cut early in the season and 8 to 10 inches high, the sweet clover is apt to be killed. The long stubble makes it rather difficult to handle the sweet clover hay. For this reason and because of the danger of killing the sweet clover, pasturing is to be preferred. Let the permanent pasture get a good start in the spring by pasturing the second year sweet clover the fore part of the season.

# Huge Mail Robbery on Ocean Liner!

Pacific Fleet and Airplane Service Take up Trail of Robbers!

## SEE!

The mighty Pacific battle fleet in action!

The naval airplanes attack from the air and their merciless bombardment.

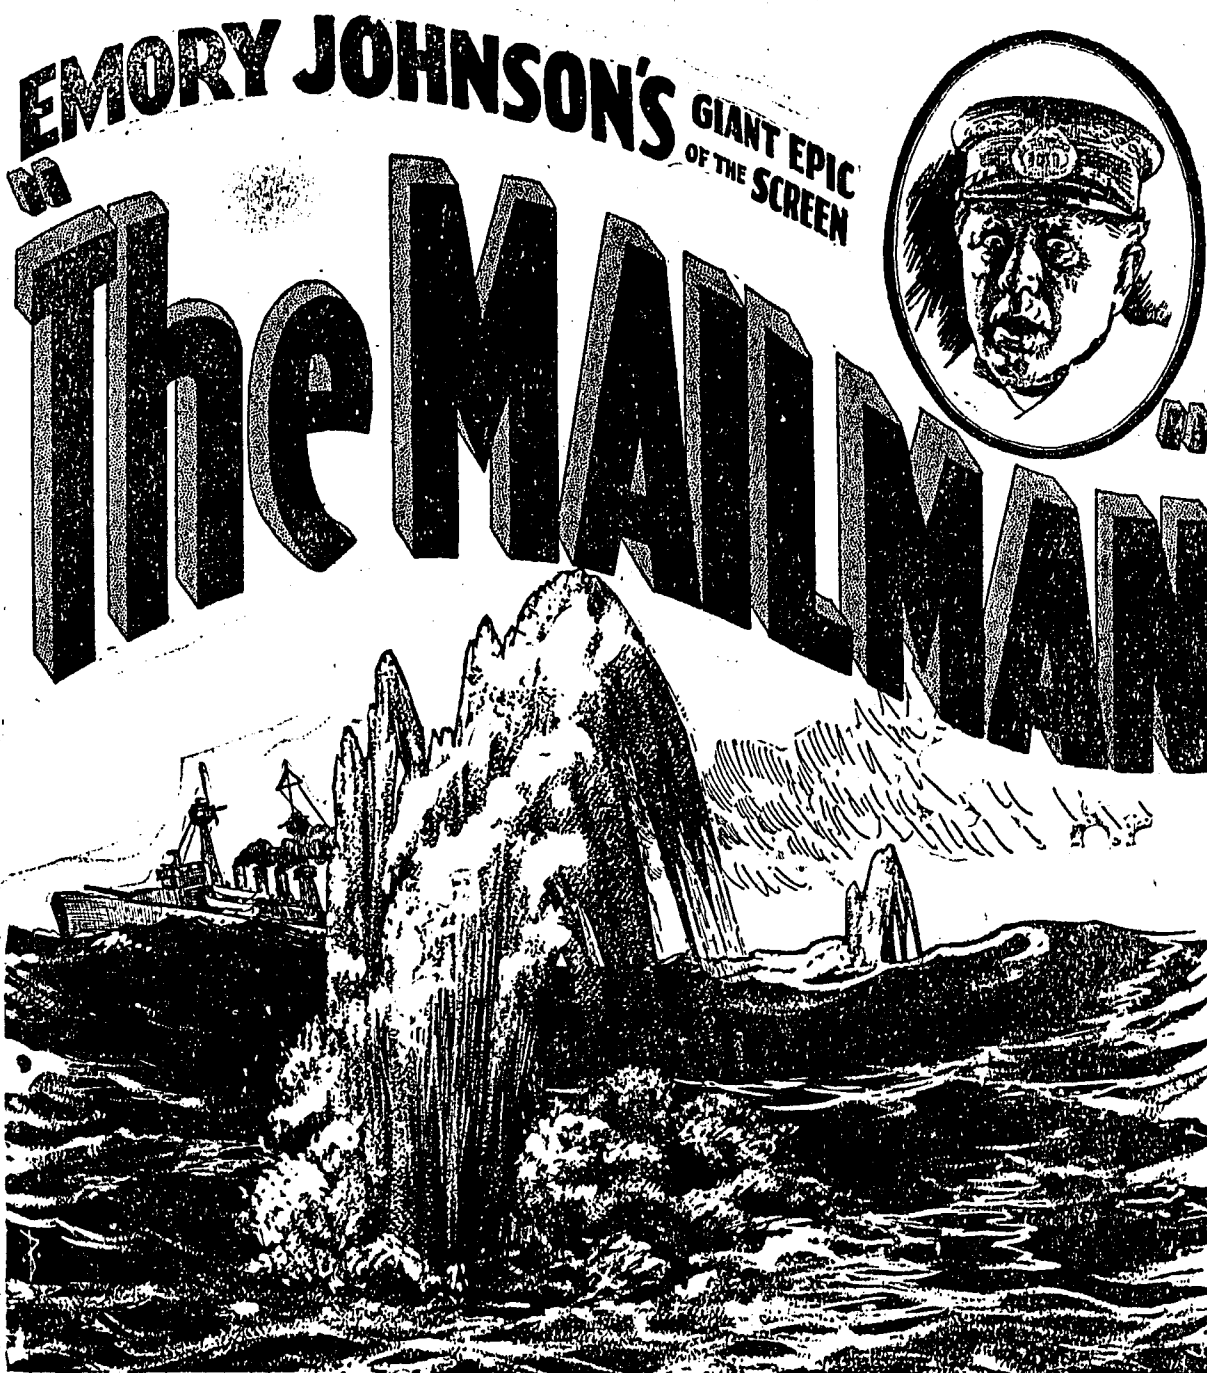

The daring mail hold-up on the high seas!

The veteran letter carrier pitch headlong into the storm-swept ocean!

Come Early to get a Seat

New York Daily News Says:

"The picture is great--- it is thrilling, human, sometimes spell-binding. You're bound to like it. It is a picture that is different."

The entire Pacific Fleet in full bombardment---aero-planes attacking from the clouds and submarines from the deep---the robbery of the post office--- the son doomed to the gallows---the race with fleeting death! All merged and blended with sweetest, soul-stirring and breathing picture ever shown.

## POULTRY

### MAMMOTH BRONZE IS MOST FAVORED FOWL

The Bronze turkey is the best all-round variety in the opinion of most breeders, as shown by its great popularity and the wide expanse of territory over which it is raised by the thousands. This breed was developed by crossing the wild North American birds with the Black turkey. The Black variety may refer to specimens selected from the wild flocks or it may refer to the Blacks reared so long in England and known as the Black Norfolk. It is said that this variety has been greatly improved by crossing with the Mammoth Bronze.

Going still farther back E. Richardson of California, a writer of turkey history, says the turkey was introduced into England from Mexico by Cortez and his followers, about the year 1524, five years after the first specimens had been sent to Spain by the discoverer and general made famous by the "Conquest of Mexico." This is from the writings of Prescott the historian. Richardson traces the name from the Tamil (Hindoo) word "toka," meaning "peacock" (which was one of the early names given by the Spaniards to the American bird) to "tukki," the Hebrew translation, and through that channel into the English "turkey."

George Emy, describes this bird very graphically when he says: "I can conceive of nothing more ornamental, taken all in all, than a stately wild gobbler, with his beard almost touching the turf, his wide-spread tail with its black bars and rich chestnut edging, his trailing wings, the crimson and blue coloring of head and neck and all the colors of sky and sea, and autumn leaves glistening upon each feather—such a bird and its half-dozen mates strutting about the lawn and shrubbery of a gentleman's grounds. Such a sight would take the mind of the busy city resident back to his childhood on the farm, or—if so unfortunate as to have been born in a town—back to his father's or mother's childhood, as often related to him."

### Feeding Young Turkeys During First Few Days

In order to prevent the heavy losses which occur among young turkeys, greater care is necessary, especially during the first four weeks. Poults should not be fed for 48 to 60 hours, then they should be given some fine grit or finely-chopped egg-shell. Care should be exercised that an ample supply of sour milk, milk curd, or cottage cheese is available.

For feeding the first few days, much the same feeds and methods as are used for baby chicks may be followed, the only difference being that in feeding little turkeys even greater care should be exercised not to over-feed. Oatmeal, hard-boiled eggs, crumbled shell and all, and Johnny cake have been found satisfactory. The poults may be gradually changed to a good-grade chick scratch, sifted finely-cracked corn, cracked wheat and pin-head oats, with a mash mixture such as is used for little chicks.

### No Good Reason for Neglecting Gardens

#### Remember to Make Successful Vegetable Plantings.

Dry weather and being behind with the farm work are no reasons for neglecting the garden. The fellow who gets the best price for his vegetables looks ahead and has them when the other fellow has allowed his garden to go to waste. Remember to make successive plantings, and keep in mind the surplus needed for canning, advises A. E. Schilleter, extension horticulturist at Clemson college, who suggests the following things to do in the garden at this season:

1. Insects are bad. Cabbage and tomato worms may be checked by dusting the plants (when wet with dew) with a mixture of equal parts of arsenate of lead and air-slaked lime. Plant lice and pumpkin bugs may be checked by spraying with nicotine. Cucumber and squash borers can be best checked by clean up methods and early planting.
2. Spray tomatoes and melons with Bordeaux mixture and arsenate of lead to prevent and check diseases and insects. Keep the grape vines covered with Bordeaux to prevent black rot.
3. Corn, potatoes, and beans require good cultivation. Keep the top soil loose and save moisture.
4. Lengthen the season by keeping the vegetables gathered when ready for use. Squash, okra, beans and cucumbers cease to bear when allowed to stand on vines.
5. Shading the ground with old papers after small seeds have been planted often results in better stands. Water and make a dust mulch about the plants immediately after setting them out. In setting out large tomato plants, take up and transplant with a ball of wet soil.

### Juries of Farmers Pass

#### Verdict on Scrub Sires

An outline for conducting scrub trials, recently prepared by the United States Department of Agriculture, has been distributed to practically every state in accordance with several hundred requests. While county agents plan to conduct most of the trials, a surprisingly large number are being planned by school superintendents, live stock organizations, business men, debating societies, creamery organizations, live stock breeders, agricultural officials of railroads, county farm bureaus, and, in one case, by a silo manufacturer.

Judging from the plans outlined, many trials will be conducted before juries of farmers, in connection with county fairs, agricultural clubs, and farmers' picnics. Although most of them will be staged as independent affairs. In a Minnesota locality the fate of the scrub sire will be decided in a town hall debate.

Copies of the outline may be obtained on application to the United States Department of Agriculture.

### Carelessness Is Cause of Spread of Foul-Brood

It is best to remove diseased colonies from the apiary as soon as discovered. Carelessness is the cause of most of the spread of foul-brood. Never use combs or equipment that have come from an apiary or district where foul-brood is known to exist. When a colony shows disease every frame connected with it should be destroyed. If there is any possibility of robbing, diseased colonies should not be opened. Be careful about moving frames of honey from one hive to another. The liberal use of hot lye water is advised in the inner surface of all hives that have been used. Be careful to remove and prevent bees getting at infected combs or honey.

## FARM NOTES

Give the little chicks milk and plenty of it.

A small flock of hens will insure breakfast eggs.

Sweet clover is showing its excellence this season as a useful pasture crop.

You are using the soil to produce crops of economic value. Do not grow useless weeds this season.

The estimated number of horses on farms in this country the first of the year was 18,268,000 and of mules 5,488,000.

If you spend a dollar's worth of labor pulling a dollar's worth of fodder which cuts a dollar's worth from the corn yield, you have lost a dollar and your time.

Variety of food is an economical and practical means of stimulating the digestive system of sheep and so long as continued, sickness will be practically unknown in the flock.

Fowls that "get bald" or lose the feathers on the head or back of the neck are usually affected with the depilating mite. A mixture of sulphur and lard rubbed on the parts will help.

Twenty cows producing an average of a hundred and fifty pounds of butterfat will give three thousand pounds a year. Ten three-hundred-pound cows will give the same amount. Why milk the extra ten?

### Coccidiosis Is Disease

#### Causing Poultry Losses

Poultry specialists from Kansas State Agricultural college had calls to a large number of farms where the growing chickens were not doing well. The usual story is that the chicks had started out nicely and grew well until four or five weeks of age. Then they seemed to stop growing, their feathers became dull and dirty, their shanks and beaks became pale, their combs became pale and half as large as normal, and their bodies thin. In some flocks almost all of the chicks were affected. Birds that survive are stunted in size and very susceptible to colds and roup.

Coccidiosis is the disease causing the trouble. It is seldom found in small flocks where natural methods are followed, where the chicks have plenty of range on sodded ground, and where their coops are kept clean. The majority of flocks affected have been those raised on ground bare of tender grass and where sanitation is not the best.

The method of control is in the proper feeding and brooding with special emphasis placed on green feed and sanitation. Raising chicks on ground free from contamination and away from old hens that may be carriers of the disease gives the best results.

### Difficult to Determine

#### Sex of Young Chickens

Experienced poultrymen find it hard to realize how difficult it is for the inexperienced to tell the sex of chickens, even at three months of age. Cases are known of cockerels of that age being shipped as pullets with the very best intention on the part of the seller. The Storrs station gives the following helpful directions for detecting the males:

"Perhaps the surest and most satisfactory method of determining the sex of those individuals about which one is uncertain is to examine the feathers on the back and saddle. On the males these feathers will be long and pointed, while the edges will show a characteristic sheen and an absence of the barbed quality of that age being shipped as pullets with the very best intention on the part of the seller. O. I. C. sow, age 2 years, with 8 pigs; Jersey bull, age 2 years. E. C. Gertje, Southwick. 37-3p

## Poultry Facts

Keep the poultry house clean and sanitary.

Keep on culling the flocks and marketing the nonproducers.

To hatch chicken eggs requires 21 days, ducks, 28; turkeys, 26; geese, 30, and pigeons 18 days.

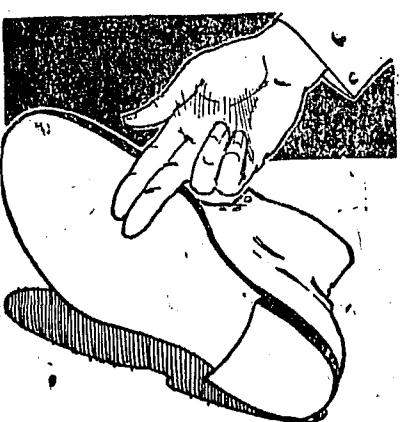

Don't wait until a week before the holidays to market poultry. Generally it pays to sell at least part of the flock early in the season.

Fresh eggs, properly preserved, may be kept from six to ten months and be almost as good for household use as fresh eggs. This is the reason preserving eggs has become so popular.

The number of eggs gathered during November, December and January is a measure of the poultryman's profit.

The number of eggs laid by next year's pullets depends greatly on the male birds selected. You can take your pick now.

One of the main things with young poultry is to keep them warm and dry. After they begin to "shoot the red," turkeys are the easiest of all fowls to raise.

## SUMMONS

IN THE DISTRICT COURT OF THE SECOND JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR LATAH COUNTY

RUFUS W. UTT, Plaintiff, vs. EDWARD ANDERSON, RUFUS J. ANDERSON, ENOS ANDERSON, GEORGE W. ANDERSON, RUTH R. CHAPIN, AMELIA DEGOWIN, and all unknown heirs and unknown devisees of Rufus Anderson, deceased, and all unknown owners of or claimants to, any right or title to, or interest in or lien or claim upon the Southwest Quarter (SW $\frac{1}{4}$ ) of the Northwest Quarter (NW $\frac{1}{4}$ ) and the West one-half (W $\frac{1}{2}$ ) of the Southwest Quarter (SW $\frac{1}{4}$ ) and the Northeast Quarter (NE $\frac{1}{4}$ ) of the Southwest Quarter (SW $\frac{1}{4}$ ) of Section Twenty-three (23) in Township Forty-one (T41) North, of Range Four (R4) West of the Boise Meridian, in Latah County, State of Idaho, Defendants.

THE STATE OF IDAHO SENDS GREETINGS TO Edward Anderson, Rufus J. Anderson, George W. Anderson, Enos Anderson, Ruth Chapin, Amelia Degowin, and all unknown heirs and unknown devisees of Rufus Anderson, deceased, and all unknown owners of or claimants to, any right or title to, or interest in or lien or claim upon the Southwest Quarter of the Northwest Quarter and the West One-half of the Southwest Quarter and the Northeast Quarter of the Southwest Quarter of Section Twenty-three (23) in Township Forty-one (41) North, of Range Four (4) West of the Boise Meridian, in Latah County, State of Idaho, the above named Defendants.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah, by the above named Plaintiff, of the nature in general terms as follows:

To quiet title to the following real property situate in Latah County, State of Idaho, to-wit:

The Southwest Quarter of the Northwest Quarter (SW $\frac{1}{4}$ NW $\frac{1}{4}$ ) and the West One Half of the Southwest Quarter (W $\frac{1}{2}$ SW $\frac{1}{4}$ ) and the Northeast Quarter of the Southwest Quarter (NE $\frac{1}{4}$ SW $\frac{1}{4}$ ) of Section Twenty-Three (23) in Township Forty-one (41) North, of Range Four (4) West of the Boise Meridian, in Latah County, State of Idaho.

And you are hereby directed to appear and answer the said complaint within 20 days of the service of this summons, if served within said Judicial District, and within forty days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and seal of the District Court of the Second Judicial District of the State of Idaho, in and for Latah County, this 30th day of August A. D. 1924.

Harry A. Thatcher, Clerk  
By Adrian Nelson, Deputy.  
Frank L. Moore and Latham D. Moore, Residence and Post Office Address, Moscow, Idaho, Attorneys for Plaintiff. 36-6

## Passing Strange

Wonder why a woman rather likes being called a vision, yet bristles at being called a sight.—Jack Canuck.

## Dairy Bureau Is Now Established

More Complete Information Needed on Fundamentals of All Branches.

(Prepared by the United States Department of Agriculture.)

The establishment of a bureau of dairying in the United States Department of Agriculture was announced on July 2 by Secretary Wallace, and at the same time he announced the appointment of Dr. C. W. Larson, chief of the dairy division of the bureau of animal industry, as chief of the new bureau. The act of congress, creating the bureau, approved by President Coolidge on May 20, provides that the secretary of agriculture may transfer to the bureau of dairying such activities of the Department of Agriculture as he may designate as primarily related to the dairy industry. All of the dairy work heretofore carried on by the bureau of animal industry has been transferred to the bureau of dairying and about 150 employees of the dairy division have been shifted to the new bureau. Appropriations for the fiscal year for carrying on dairy work in the department amount to approximately \$400,000.

**Need of Dairy Industry.**  
In discussing this latest development in the Department of Agriculture, Secretary Wallace said that the need of the dairy industry is for more complete information on the fundamentals underlying all its branches, and that the solution of the problems lies largely in research. He also emphasized the need for better methods of feeding and care to enable dairymen to produce milk more economically. At the same time he spoke of the necessity for even better sanitary conditions and improved methods for utilizing by-products.

Doctor Larson is well known to the farming and dairy interests in all parts of the country, having been engaged in some branch of this work for the past 20 years. He was born in Mitchell county, Iowa, in 1881, and was raised on a stock farm there. He was graduated from the Iowa State College of Agriculture in 1906 and for

a short time was connected with creamery and cheese factory work in Wisconsin and Minnesota. In 1907 he became a member of the faculty of Pennsylvania State college and in 1918 he was made professor in charge of the department of dairy husbandry. In 1916 he received the degree of doctor of philosophy from Columbia university and was appointed assistant professor of agriculture and agricultural economics at that university. In 1917 he joined the staff of the United States Department of Agriculture and since 1921 has been chief of the dairy division of the bureau of animal industry.

## Plans for Bureau.

The plans for the new bureau, says Doctor Larson, are quite largely a continuation of the work which has been going on for the past few years. It is his opinion that many of the fundamental problems of the industry are yet to be solved. He plans to introduce the results of research into the industry as rapidly as possible.

Among the important lines of work which will be continued are the introduction of co-operative bull associations, the statistical study of cow testing associations, studies of the underlying principles of breeding to insure, if possible, the same uniformity in the transmission of high milk and butter fat producing capacity in dairy cattle as is being secured with other characteristics by breeders of flowers, fruits, and grain. Special stress will be laid on the study of nutrition of dairy cattle, in which field considerable progress has been made in the last few years. A nutrition barn and laboratory have recently been completed at the Beltsville farm near Washington. Herd management problems also are being studied at this farm, as well as experiments with silage, types of barns, and many other problems.

The market milk investigations, which will be continued by the bureau, will deal largely with studies in dairy sanitation and milk plant management. The purpose is to save losses in unsaleable or low grade milk and to effect economies in the preparation of fluid milk and cream for delivery. Work will be done on bacteriological and physical changes in milk and cream and studies will be conducted on labor requirements and the efficiency of dairy machinery.

The investigations in the manufacture of dairy products will be carried on, as heretofore, at the creamery in Grove City, Pa., which is managed under the direction of the bureau of dairying, and also at the bureau laboratories in Washington. The Grove City creamery provides facilities for putting into practice on a commercial scale methods which have been worked out in the laboratory. Here work will continue on the problem of sweet cream butter, swiss cheese, ice cream, condensed milk, milk powder, and by-products. It is

not planned to enlarge the laboratories in the immediate future, but according to Doctor Larson, they will be worked to full capacity in the attempt to solve the important problems of the industry.

## Increased Income.

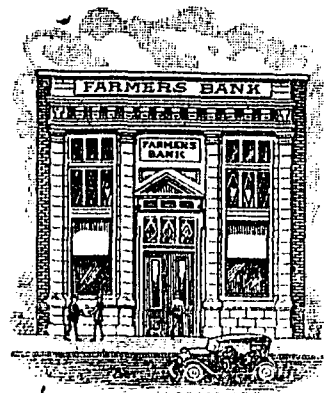

Anyone having a complete set of poultry raising equipment can enlarge their operating season, as well as their income, by hatching summer chicks and raising them for the fall and holiday markets.

## Amended "Touch"

Beggar (after receiving coin)—Oh, lady, only a nickel—what a pity to open such a beautiful bag for such a trifle.—Boston Transcript.

## Not a Common Occurrence

Awkward Maid (who has been permitted to hold the baby, with disastrous results)—"Terrible! Terrible! I can't imagine how it happened. Really, I assure you, I—I hardly ever drop a baby."—Pearson's Weekly.

## Are You Aware

That money in your pocket is half spent? To guard against this phase of extravagance you should maintain two accounts—a checking account for daily use and economy, and a savings account for surplus funds. This bank welcomes checking accounts in any amount and pays four per cent compound interest on savings deposits from one dollar upward.

## GLEANINGS

Joe Fruchtl of Lenore was a Kendrick visitor Tuesday morning.

Geo. P. Barnum was transacting business in Moscow the first of the week.

Mr. and Mrs. R. D. Newton and two daughters and Mr. W. D. McGregor spent the week end at the home of Mr. McGregor's daughter, Mrs. Harvey Smith, of Moscow.

Bee Hive Rebekah Lodge No. 66 will hold a harvest Carnival at the I. O. O. F. hall at Leland, Friday, September 19. Everybody is cordially invited to attend.

Mr. and Mrs. Ira Havens and family of American ridge returned last Saturday from a trip through Yellowstone Park. They report a fine trip with no car trouble to mar the pleasure of the outing. Mr. Havens says the sights at the park are well worth the trip.

W. F. Albright was transacting business in Kendrick last Saturday morning.

A trial jury for the district court of Nez Perce county was drawn, Monday. There are 35 members on the jury list who will report Sept. 17 at Lewiston. There will be about 30 cases tried at this term of court. Following are the jurors who were drawn from the Potlatch section: J. R. King, Southwick; Charles Larson, Cameron; Emil Peters and Herman Koepf, Leland; Frank Southworth, Lenore; Louis Oldag, Cameron; Charles Hill and R. Winegardner, Juliaetta; Fred Phillips, Arrow.

A dance will be held at Community Hall on Bear ridge, Friday night, September 19. Fairfield's orchestra will furnish music for the occasion.

Sometimes it looks as if Mr. Coolidge thinks he is still running for vice president.—Tribune.

Mr. and Mrs. Otto Schupfer and daughter and Mr. and Mrs. E. A. Deobald and two daughters returned Wednesday afternoon from their vacation trip to the coast. They covered over 1800 miles with the car and traveled 100 miles by ferry near Vancouver. They report a splendid trip and the only car trouble encountered was a broken oil pipe, which was a minor item.

Mr. and Mrs. H. P. Hull returned last Friday from a business trip to Spokane.

Herbert Quick arrived Wednesday from Montana to look after property interests in the Cedar Creek section.

Mrs. J. S. Vincent and daughter, Katherine, of Lewiston, sent Sunday in Kendrick visiting at the home of Mr. and Mrs. H. P. Hull. Mr. Vincent, who died a number of years ago, was the first printer to work in the Gazette office when it started over thirty years ago. He later became owner of the paper.

Mr. and Mrs. Melvin Morley drove over to Gifford, Sunday, to spend the day at the home of Mr. and Mrs. Guy Hillman.

Mr. and Mrs. Charles Riggie are leaving today for Viola, where they will spend the winter. Mr. Riggie will teach a rural school near Viola. Tom Blevins, local section boss, has rented the Riggie residence here.

Mrs. Jennie Plummer arrived Wednesday afternoon to visit friends here.

Mr. and Mrs. Martin V. Thomas expect to leave today on an extended visit with relatives and friends in Missouri.

In the soft twilight the boarding house sitting room looked cozy, most attractive. The comfort must have thawed the heart of the oldest boarder. In an expansive moment he turned toward the landlady, clasping her hands, murmured: "Will you be my wife?" The woman did not start or blush. "No, sir," she replied, with calm deliberation. "I'm sorry, but I can not marry you. You've been here 4 years, are much too good a boarder to be put on the free list."

Look on third page for extraordinary announcement. —37-1t

## TEXAS RIDGE

Mr. and Mrs. Lloyd Randall returned to their home, Tuesday after a week's visit at the home of his sister, Mrs. Martin Frantzich.

Mr. and Mrs. Slocum and family motored to Bovill, Sunday.

Mr. and Mrs. Birchmer were Moscow visitors, Sunday.

Emory Olson and family of Deary and Lester McGraw and family of Bear ridge were entertained at the

Jake Alber home, Sunday.

Chas. Carlson went to Juliaetta the first of the week and brot back a load of tomatoes and melons.

Grandma Baker went to Juliaetta to spend the winter. She was accompanied by Howard Baker, who will make his home with her and attend high school.

Mr. and Mrs. Martin Frantzich entertained Martin's brothers and sister from near Troy, also Mr. and Mrs. Gust Frantzich and children of American ridge, Sunday.

Mrs. Viola Baker visited with Mrs. Dahlgren, Monday.

Herman Baker spent the week end in St. Maries.

## BIG BEAR RIDGE

Miss Lizzie Jones entered the Kendrick high school, Monday.

Miss Doris Olson of Spokane, is spending the week here as the guest of Miss Bertina Forest.

Mr. and Mrs. Halvor Lien Mr. and Mrs. Zack Aus and son Adolph were Moscow visitors Thursday.

Rev. Martin will hold preaching services at the Community Hall, Sunday, September 14, at 11:00 a. m. Everyone is cordially invited to attend.

Mr. and Mrs. James S. Nelson and daughters were recent Clarkston visitors.

Mrs. Ole Lien entertained the Lutheran Ladies Aid Monday afternoon.

Mr. and Mrs. Gabriel Forest and Mr. and Mrs. Anton Nelson and daughter, Miss Flora, spent Sunday at the Nels Nelson home on Little Bear ridge.

The Rimrock school began Monday, with Miss Dorothy Jones as teacher.

Born to Mr. and Mrs. John Halseth, at Bovill, September 7th, a daughter.

Born to Mr. and Mrs. John Elliott, August 30, a son.

Mrs. John Mathes of Bovill spent the week end with friends here.

Joseph Clemenhausen has rented the Frank Whitcomb farm. Mr.

and Mrs. Whitcomb will have a sale September 23, and will make their home in Oregon.

The Girls Sewing Club will hold their annual Art Work Sale some time in October. Watch for further announcements of the definite date.

## STONY POINT ITEMS

Lloyd Eckman and family of Asotin, Wash., have moved to the Davis place, recently bought by Frank Hoisington. Mr. Eckman has rented bean ground and will also assist with the farm work on the Hoisington ranch.

Miss Emma Schetzle left Saturday for Troy where she will teach in an adjoining district.

Art Wodielman is working for Leonard Fairfield this week.

Clarence Dygert helped Lloyd Eckman with his moving the first of the week.

Bill Schetzle visited his brothers at Bedrock last week.

Mr. and Mrs. P. M. Johnson moved to Juliaetta the first of the week. They were accompanied by their granddaughter, Marie Dygert, who will attend high school at that place this year.

## JUST SUPPOSE

If all that we say  
In a single day  
With never a word left out,  
Were printed each night  
In clear black and white,  
'Twould prove queer reading no doubt.

And then just suppose  
Ere one's eyes he could close,  
He must read the day's record thru.  
Then wouldn't one sigh  
And wouldn't he try  
A great deal less talking to do?

And I more than halt think  
That many a kink  
Would be smothered in life's tangled thread,  
If one-half that we say  
In a single day  
Were left forever unsaid.

Author Unknown.

## CRESCENT CLIPPINGS

Frank Meyers left for Kendrick.

## ARE YOU READY

For the Next Cold Snap  
When It Snaps?

If not, snap out of it and snap in here where the snappy, warm duds are. The prices are snappy, too.
