

Kendrick News 20 Years Ago

Item Taken from the Gazette Published in 1904

We predicted in these columns last fall that ere another year passed the Northern Pacific would have a double passenger service daily on this branch and as may be seen elsewhere in this issue the prediction has come true.

Capt. Carlton has a sale scheduled for next week at Culdesac. This is a large one, the item of horses alone being over 40 head.

Several carloads of immigrant goods have arrived here the past few weeks. Parties who have purchased farms on the Potlatch and have shipped their goods and a starter in stock from their eastern homes by this method.

D. J. Rowlands has accepted a position with Fred S. Beckwith and assumed his duties Thursday.

Miss Hamley has a display of photographic goods in the shack formerly owned by T. B. West.

Charles Hamlin is doing some good work on the new crosswalks, though slightly handicapped through want of timber. He is making the crossings on grade with the sidewalks and will make the approaches thereto out of brick bats. The sidewalks are laid to grade with a width of ten feet.

Monday morning the Hotel Kendrick expects to throw open its doors to the public and mine hosts, Schill and Bornholdt will welcome the public to its inviting interior. The lower story contains the bar, office, dining room, while the second floor has 24 rooms for its guests.

Math Jacobs arrived here Tuesday and was shaking hands with old friends. He congratulates

J. C. Thomas, brother of Martin and father of Mrs. J. Fruchtli, left Wednesday for his eastern home after a visit here and on the reservation. He is simply delighted with this section and in all probability will sell out his interests and locate in this vicinity.

John Brocke has decided not to cut wood this winter and will probably attend to ranching until spring.

The roof is finished on the McCrea building and the lathers are busy on the interior.

U. of I. Poultry Exhibit

The poultry department is preparing an exhibit in connection with the Panhandle Poultry Association Poultry Show on December 8-14, 1924. The large display cards used in connection with the University of Idaho-Union Pacific Poultry train will be shown. These cards give information on breeding, feeding, culling, housing, marketing and turkey raising. C-16 the 320-egg Leghorn hen its mother 585 and other high producers of the University flock will be on display in connection with its exhibit.

The students in poultry judging will exhibit the birds, the student in marketing an egg exhibit and the short course students will prepare the general poultry department exhibit.

Nez Perce Precinct Officials

Following are the justices and constables in some of the nearby precincts in Nez Perce county, according to the results of the official canvass:

Arrow—Fred Albright and H. O. Woodruff, justices of the peace; Fred Phillips, constable.

Ieland—Russell Smith and Wm. T. Beck, justices; A. DeWinter, constable.

Lenore—Bruce Hersey, and M. Grandquist, justices; Frank Wohlsein, constable.

Myrtle—F. L. Hoskins and U. J. George, justices; E. Spivey, constable.

Southwick—W. J. Southwick and Gordon Harris, justices; Darl Wright, constable.

Latah County News Paragraphs

Items of interest Taken From Neighboring Papers

Lester Wishard, a young man living at Genesee, is the victim of a disease which does not occur very frequently in man. In the bovine it is usually called "lumpy jaw." The name by which it is known to the medical profession is "actinomycosis." Up to the year 1910 only one hundred and ten cases were reported in the United States, affecting man.

This young man was seen and treated by physicians in Lewiston who were unaware of the true nature of the disease. Last week the boy was brought to Moscow by his grandfather, who made application for county aid for the boy. The case was turned over to Dr. J. W. Stevenson, county health officer, who recognized it as a case of actinomycosis, as he had seen the disease before in the case of a cattle man.

The disease is one affecting cattle and is caused by the "ray fungus" which grows on grain, and it is from this source that cattle are affected, and sometime man also. In this case it is the face and neck that are affected up to this time.—Star-Mirror.

"Armistice Day" was observed Tuesday by a program in the assembly for the whole school with the exception of the first and second grades. Theda McGahan and Marian McComb made impressive talks on the significance of Armistice Day and the Flag. Mr. Weaver then spoke at length of his experiences during the Civil War. A silk flag, given to the Junior Class by the Lewiston Children's Home, was accepted by Raymond Johnson as president. Evelyn Hagan accepted the flag won by the eighth grade.—Troy News.

Last Monday when Wm. Cox of American ridge brought his cream to town, as was his usual custom he tied his team to the side of the warehouse while waiting for the train. When the train came in, for some unaccountable reason the team became frightened and in their scramble to break loose one of them broke its neck.—Julietta Record.

At a meeting of the board of directors of the Genesee Exchange Bank Monday evening, D. L. Bressler, who has been assistant cashier of the Exchange bank for the past several years, was made cashier of that institution, succeed Chas. P. Whallen, who resigned his position as cashier on account of ill health.

Mr. Bressler is said to be the youngest cashier in the state of Idaho, he not having yet reached his thirtieth year.

To be cashier of an institution such as the Genesee Exchange bank is to be honored in a way that few men of more mature years are honored and while the responsibility is great, yet Mr. Bressler is competent and confident, both of which go to make for success. His many friends here will be glad to learn of this promotion and are glad with and for him.—Genesee News.

Eight outside teachers attended the meeting held at the Deary grade school last Wednesday, under direction of Miss Drake, state rural school supervisor, and Miss Ellen Peterson, county superintendent.

The forenoon was taken up by demonstrations in teaching, each Deary teacher instructing two classes. In the afternoon the teachers held a round table discussion.

Much interest was manifested.—Deary Press.

Return From Hunt

Frank Crocker and two sons, Charles and Lester, returned Thursday evening of last week from a deer hunt in the Three Bear country. The first day they hunted, Charles shot a deer within a half hour after he started to hunt. The party spent several days there but on account of the deep snow and stormy weather the deer had left the higher country. Snow on Tamarack mountain more than 18 inches deep.

Ninth Annual Poultry Show

To Be Held at Moscow on December 8-14

The Panhandle Poultry Association will hold its ninth annual winter poultry show in Moscow, December 8-14, 1924. There is every indication that it will be much larger than last year, when there were more entries than ever in the history of the Association. Through the efforts of the local poultrymen, the Idaho Poultry Breeders' Association will hold its annual meeting here for the first time in its history. By securing the largest number of new members in the American Poultry Association of any association in Idaho in 1924, the local association has won the distinction of having the American Poultry Association Silver Cup Show for Idaho and can offer a valuable loving cup for best display in the show, handsome special medals for first-prize cockerels and best displays in each class of all member of the American Poultry Association showing in the show. The exceptional prizes being offered this year, will probably draw birds from every part of the Northwest.

The Moscow Chamber of Commerce and the Idaho State Board of Agriculture have given liberal financial aid. The additional active support of the business men of Moscow, the Poultry Department of the University of Idaho, the Idaho Poultry Breeders' Association and the American Poultry Association will make this one of the outstanding Northwest shows this winter.

The competition is open to the world. Premium lists may be obtained by writing to R. T. Parkhurst or H. W. Hulbert, Moscow, Idaho.

Agricultural Census

The Census of Agriculture will be taken in each state during the next two months, according to G. S. Ray, supervisor of the 2nd district of Washington. This census will show the farm production and expenses for the year 1924, and live stock on farms January 1, 1925.

Sample schedules have already been mailed to all farmers on rural routes so that they will know what information they are expected to have when the census enumerators call. The farmers have been asked to fill out these sample schedules and keep them until the census enumerator calls for them.

All information on the census schedules will be treated strictly confidential and will not be used as a basis of taxation nor communicated to any tax assessor.

For the next five years this census will be the basis of all estimates of crops and live stock products made by the Department of Agriculture. It will be the basis on which products worth \$10,000,000,000 a year are sold. Many plans for the improvement of agricultural conditions will also be based on this census.

Word was received here the first of the week that Julius Nelson, who was clerk at the local depot last summer for several months, died at Wilbur, Wash., recently from infantile paralysis. He leaves a wife and one child.

Death of A. W. Longfellow

A. W. Longfellow, who for the past 35 years or more has been a resident of the Potlatch country, died at a Spokane hospital, Tuesday evening of this week. Death was due to cancer of the stomach. While his death was not unexpected, it has cast a shadow of grief over the entire community as Mr. Longfellow was a man who was held in the highest esteem in this locality. An obituary will be published in next week's Gazette.

Kendrick Band Shows Progress

Much Interest Manifested at Rehearsals

The progress of the newly organized Kendrick band is encouraging in the extreme. At the rehearsal last Monday night there were 35 members present and all were delighted with the manner in which the rehearsal was carried on. Many of the members are just beginning but at the last rehearsal the band was already playing simple selections in a creditable manner.

A local band has never started out under more favorable circumstances than the present one. In the past it has always been difficult to secure sufficient cornets for the lead parts. The band now has nine cornets. There are also eight instruments in the trombone section.

The members of the band are enthusiastic over the prospects and are taking a very keen interest in the rehearsals. Present indications are that Kendrick will have a splendid, big band before many months roll by.

Walter Thomas, who organized the band and is the instructor, is using a different method than has been tried before. He is starting all the members from the beginning and will carry them on up together, thus giving some of the older band men a better foundation than they have heretofore had. The plan is apparently a very satisfactory one.

\$300 and 90 Days

T. B. West, attorney of Lewiston and at one time a resident of Kendrick, plead guilty last Saturday to the charge of sale and possession of moonshine, was sentenced by Judge Dietrich to serve 90 days in the town and its appearance, the Nez Perce county jail and to pay a fine of \$300.

Community Meeting

One of the most pleasant occasions of the season is anticipated for next Tuesday evening, November 25, 7:30 p.m., when the entire community—every man, woman and child, whether church member or not—is cordially invited and earnestly requested to come to the Methodist church and participate in a "Social get-together."

Please assemble in the basement and from there you will be escorted to the auditorium, where a very interesting program will be given. Some of the special features are: short talks by representative people of the community, quartet selections and instrumental numbers. The principal address will be given by Dr. Norman McCay, pastor of First M. E. church of Pullman, Wash. Kendrick is indeed fortunate in having him here for this occasion.

Following the program the ladies will serve punch and wafers in the basement. It is hoped that everyone will enter into the Community Thanksgiving spirit and come and enjoy the evening together.

A Thanksgiving program and basket social will be held at the American ridge school house at 8 o'clock Tuesday evening, November 25. Everybody invited.

Burglars Entered Kendrick Stores

Foiled in Attempt to Get Away With Loot

The Carlson Hardware and the Kendrick Store Co. stores were broken into yesterday morning, sometime before two o'clock, 2 guns from the hardware and clothing and cash to the amount of \$5.00 from the Kendrick Store being taken.

About 2 o'clock the night operator at the local telephone exchange, noticed a light flashing in the Kendrick Store, which is directly across the street from the phone office. The operator immediately called up Mr. Dammarell and also notified Herman Schupfer, who gave her instructions to call Frank and Lester Crocker, the town marshal J. G. Gardner, and E. A. Deobald. In a very short space of time there were seven men stationed at advantageous places surrounding the Kendrick store. The plan was to watch the front, side and rear doors of the store until the robber, or robbers, attempted to come out. Frank Crocker was stationed at the rear door, Lester farther back toward the corner of the Ruchdale warehouse, E. H. Dammarell and John at the hotel corner, Joe Gardner, E. A. Deobald and Herman Schupfer directly across the street from the store building. The men had hardly posted themselves at their various stations when the electric lights went out, probably due to a short circuit on the line caused by the wind storm.

Shortly after the lights went out Frank Crocker heard some one coming out of the rear door. He demanded who it was and the man replied "Why so?" It was too dark to distinguish anything and before Mr. Crocker had time to shoot, the man had slipped around the corner of the building. He crossed the street and went over to the hotel corner toward the Dammarells. He evidently heard them and changed his course across the intersection toward the phone office corner. Those on guard there paid little attention to him until he got past, thinking it was Mr. Dammarell coming over to them. As soon as the man started past, Mr. Gardner asked who it was and the man replied "Hist! It's George." Mr. Gardner then called to him to stop, but as he continued toward the rear of the Temple building, he opened fire on him with a repeating shot gun, firing 3 shots. It was so extremely dark that it was impossible to tell whether the shot took effect.

When daylight came it was learned that the man or men, had taken the glass from the side window of the Carlson Hardware, entered the building and secured 2 guns, ammunition and a cartridge belt. From there they went to the Kendrick Store, broke the glass from the side window and entered the store. Owing to the fact that the window is so high from the ground, it is hardly believed that a man could enter without assistance, which would indicate there were probably two or more implicated in the robbery.

The robbers then rifled the cash register, securing \$5.00 and then filled a new suitcase with clothing. The suitcase was found at the rear of the old blacksmith shop directly behind the store. It contained an overcoat, 2 suits of clothes and other articles of wearing apparel, all new merchandise from the store.

Following the tracks from the rear of the Temple building they led along the rear of the town park and then up a small draw to the road leading up on American ridge. At the lower end of the draw was found a grain sack containing two loaves of bread and a quantity of smoking tobacco, which had evidently been dropped by one of the robbers in his flight.

It is impossible to tell with any degree of certainty whether the job was done by local talent or outsiders. If the lights had stayed on a few minutes longer, there would be no need at this time for surmise.

News Notes From Kendrick School

Student Activities as Told by Special Correspondent

There are seventeen of us in the 8th grade. Eight of us are straight 8th graders and the rest of us are carrying the 8th grade work and trying to make up the work of the 7th in which we failed last year. We are making head way slowly.

One morning Mr. MacGregor asked us why we insisted on coming to our arithmetic class at 8:50 without any preparation. Some of us didn't know so he sent three of us home to find out.

There are nine of us in the 7th grade. Those of us who attend regularly are doing fairly well.

Our teacher says we are a very busy people. We think we should be dubbed "The Busy Bees." Busy with everything except our assigned school work. That is a secondary matter. No excitement in preparing an arithmetic lesson.

We are very anxious to have our parents visit the grammar room. They will then need to ask no questions about our report cards which are soon due.

The third and fourth grades have been studying about Thanksgiving in connection with their art, language and history classes. They are now learning a Thanksgiving song in connection with their music.

The fourth grade pupils are making vocabulary lists, so they will be able to speak better English, by having a wider variety of words in their power.

Troy basketball teams come here tonight for a game with the K. H. S. This year Troy has a strong team so come out and see a clean snappy game, with Kendrick as a winner. Between halves the high school will pull some stunts. After the game the high school will entertain the Troy team at a party.

Donate to Memorial Fund

Norla Callison, chairman of the Idaho Memorial drive on American ridge and ably assisted by Clarence Daugherty and Ernest Roberts, made a good showing for that community. A total of \$77 was raised. Following is a list of those who made donations:

Harry Langdon	\$5.00
Cecil Roberts	1.00
Clarence Daugherty	5.00
Frank Benscoter	2.00
Agnes Jones	1.00
Jim Cain	4.00
Ingvald Aas	2.00
Walter Taylor	1.00
Walter Benscoter	4.00
Warney May	5.00
Ira Havens	1.00
Mrs. S. Bigham	1.00
Mrs. M. A. Deobald	1.00
Frank Roberts	5.00
Claus Eichner	8.00
Henry Eichner	3.00
Clifford Davidson	1.50
Percy Mattoon	1.50
Ernest Roberts	5.00
B. E. Callison	5.00
Norla Callison	5.00
George Davidson	5.00
Walter Bigham	5.00

Death of Rev. Bramblett

Rev. Bramblett, who is well known in this locality, died at the home of his daughter in Spokane last Saturday. Funeral services and burial were held in Spokane in charge of the Masonic lodge, of which order Rev. Bramblett was a member for many years. His son, J. N. Bramblett, is farming on Bear ridge.

Two Turkey Shoots

There will be two turkey shoots in this locality the first of next week. On Monday, November 24, a shoot will be held in Kendrick. The following day a big shoot will be held at Cameron. A good chance to get your Thanksgiving dinner.

N. B. LONG & SONS

Greatest Rousing Fall Sale

NOW ON IN FULL BLAST

Yes it is a fact we are giving the people of this section the greatest values they have seen for years. If you haven't already attended this sale, by all means be here Saturday, we will try and have enough clerks to wait on you. Every day of this sale has been a record breaker. This sale ends Saturday Night, November 29th.

A Land Slide of Bargains

Don't Miss It

Entered at the post office at Kendrick as second class mail matter.

Foreign Advertising Representative
THE AMERICAN PRESS ASSOCIATION

Why all this continuation in the public press of the effort to show that the farmer has no right to call on his government for laws affecting agriculture? Notice it? Magazines and newspapers all the way from the Saturday Evening Post to the Lewiston Tribune are keeping up the diatribe. Is it to smoke-screen the industrial lines which are favored by the protective tariff law and the transportation laws? Let there be a hint at taking even a little of the government's protection from these and there is a mad rush and howl to prevent it. Here is one line which was not settled by the election, and it may be that this realization is the cause of the continued mutterings against any governmental aid for the farmer.—Nez Perce Herald.

Kendrick needs a new town hall. The present structure was built many years ago to tide over an emergency. I don't line up well with the other public institutions of the town and is decidedly lacking in beauty. The location is also a very poor one. It hardly forms the basis of any inspirations that might come to the members of the town council in their regular monthly sessions. Neither is it a creditable place for the holding of public meetings. It is lacking in appearance and facilities for promoting comfort.

STONY POINT NEWS

Leslie and Earl Heimgartner spent Sunday with Alvin Steigers.

Mr. and Mrs. Woffman were Sunday visitors at the Leonard Fairfield home.

Ike Steensma and family motored to Lewiston, Tuesday.

Will Steigers was called to Culeback Monday on account of the illness of Mrs. Robert Steigers.

Will Zumhofe and Cletis Hoisington helped Leonard Fairfield butcher hogs, Monday.

Lloyd Eckman and children returned home Wednesday from Astoria where they spent a few days visiting relatives.

Ernest Steigers left Sunday for Orofino where he will work for Contractor Burnis, who is doing road work there.

Mrs. Lloyd Eckman died at her home last Tuesday evening after a long illness from lung trouble. She bore her suffering patiently until death came as a relief to her frail pain tortured body. She was 33 years, 1 month and 9 days old and leaves her husband and 2 sons, 9 and 6 years of age, her parents, 4 brothers, one sister, two grand parents, besides a host of other relatives and friends, to mourn her loss. She was greatly loved and respected by all who knew her. Funeral services were conducted by Rev. F. G. Hoskin at the U. B. Church at Julietta, Friday, and despite the stormy day her many friends followed to her last resting place. The body was laid to rest in the Fox ridge cemetery by the side of her sister who died several years ago.

SOUTHWICK NEWS

Paul McClelland who resides in South Dakota arrived Saturday for a visit with his brother, Wm. McClelland. He left Tuesday for Potlatch where he will visit with Miss Wilma McClelland for a short time before returning home.

The family of Ben Davis have the smallpox, five of the children being ill. However it is in a very light form.

School started again Monday at Cavendish after having been closed a week on account of a number of families around there having smallpox.

Mr. and Mrs. Floyd Russell were Sunday guests of Mr. and Mrs. E. McGuire of Cavendish.

Mrs. Eva Starr and son were Kendrick visitors, Saturday.

Wm. Winters and wife left last week for Palouse where they will visit for a time with friends.

A number of friends of Miss Emma Starr gave her a very pleasant surprise Sunday evening, the occasion being in honor of her birthday.

Homer Betts went to Kendrick,

Tuesday, returning home Wednesday.

Word was received of the marriage of Marion McClelland to Miss Beatrice Ruble of Kamian the 12th of this month. Marion is the son of Mr. and Mrs. Wm. McClelland of Southwick. His man friends wish him a long and happy life.

Darl Wright and John Stalnaker were business visitors in Moscow a couple of days last week.

Mr. and Mrs. Kauder and Mrs. Frank Souders of Crescent were dinner guests of Wells, Monday.

Ward Helton spent Sunday with Elton McCoy.

Claud Kime is out of quarantine now and is back on his old job of carrying the mail.

The little son of Mr. and Mrs. Ben Presnel was in quite a serious condition, Monday afternoon, on account of getting a dose of strong liniment given him by his little sister while at play. Late reports are that he is out of danger and doing nicely.

Harold Whittinger and family visited with his sister, Mrs. Frank Thornton, Sunday.

Miss Agnes Huckle and Nadine McCoy were the dinner guests of Miss Callie Maury, Sunday.

John Tannahill and son of Oklahama were visiting at the home of Mr. Tannahill's uncle, George Jones, Sunday and Monday.

The snow that fell last week is going fast owing to the sunny days. There is none at all in the roads and people are still using their cars.

TEXAS RIDGE NEWS

(Too late for last week)

A number of ladies met at the home of Mrs. Dahlgren last Wednesday afternoon and organized a ladies aid. Officers were elected as follows: president, Mrs. H. Slocum; secretary-treasurer, Mrs. Ogden.

Mr. and Mrs. Carlstrom were Lewiston visitors last week.

Mr. and Mrs. Charles Carlson are the proud parents of an eleven pound son, born November 8.

Miss Agnes Johnson of Bear creek was a visitor at the Slocum home last week.

Mr. and Mrs. Frank Bailey of Lewiston have a new baby girl, born Nov. 7. Mr. and Mrs. Bailey were former residents of Texas ridge.

Mr. and Mrs. Quesenberry and

family and Miss Kidney were Sunday dinner guests at the Ogden home.

Mrs. James Miller visited with Mrs. Babcock Monday afternoon.

Improved Milk Shipping Methods to Avoid Loss

To develop better methods for handling and shipping milk from the farms to the city market is the object of an investigation of practices in various milk plants, which is being made by the dairy division of the United States Department of Agriculture. Milk losses during shipment have a marked effect upon the price that the consumer must pay for the product, and upon the price that the farmer receives for the product. The losses are of two kinds; those resulting from milk souring in transit, and those from theft, spoilage and leakage. Both are believed to be avoidable if the farmer, country dealer and city dealer will work together.

Dealers are being asked to give information on various subjects, such as the methods used for transporting milk from the farm to the dealer, the protection provided for milk while in transit between the dealer and the city market, and the relative efficiency of different types of refrigerator cars.

Five Points to Observe in Selecting Dairy Cow

The five points to be observed in selecting a good dairy cow are as follows:

- First—Large body, and especially middle piece, indicating a capacity for eating and digesting a lot of food.
- Second—Thinly fleshed backbone, and especially back of the shoulders. This indicates that the food is not made into flesh.
- Third—Large udder, as it is here that the milk is made.
- Fourth—Large milk wells. It is through these that the blood returns to the heart from the udder. If they are large, it indicates that a large amount of blood passes through the udder.
- Fifth—Large, clear eyes. This indicates good nerves, and they drive the organs of digestion and milk-making.

Treating Hard Milkers

Hard-milking cows are treated by the persistent use of dilators or by cutting the lining membrane of the teat with a teat bistoury. After this is done a little milk must be stripped away often during the healing process. In some cases it may be advisable to cut away a small portion of the tip of the teat. These instruments may be obtained and used at home, but it is usually best to have the work done by a veterinarian unless one is skilled with the instruments.

Get a turkey at the big shoot in Kendrick, Monday, Nov. 24. Everybody come. 47—lt.

FAIRVIEW ITEMS

(Too late for last week)

John Glenn was a business visitor in Moscow last Saturday.

Mr. and Mrs. Wm. Wolf and son were visitors at the Heffel home.

Mr. and Mrs. Virgil Flesham and family, Mr. and Mrs. James Helton, Mr. and Mrs. Roy Morgan and son Melva Walker were Sunday dinner guests of Mr. and Mrs. Oney Walker.

John Glenn has installed a new radio in his home. Miss

Dorothy Boyd spent the week end with her sister, Edith, at Spokane, where she has been taking medical treatment. We are glad to say that Edith is better at this writing.

Worth Trying

"Ignoring people often makes them feel small, and ignoring your own troubles is likely to do the same thing to them," philosophizes the Muskogee Times-Democrat.—Boston Transcript.

Shoulder to Shoulder

Every human body may be a battlefield against invisible disease foes. Consequently, every individual should be a trained fighter, and though we march apart, we must fight together.

"I Bought It Because
It's the Best
Phonograph"

That is why the New Edison is the choice of discriminating music lovers everywhere. Its superiority is quickly proved in side-by-side comparison with other phonographs.

Yet It Costs No More

The Red Cross Pharmacy

Barrel for Feeding Slops Quite Handy

Saves Task of Dipping Out Material by Bucketful.

Feeding slops, which are mixed together in a barrel, is quite a tedious task, as the stuff has to be dipped out of the barrel and fed to the hogs by the bucketful. A much easier method of emptying the barrel is shown in

Pivoted Slop Barrel on Farm Facilitates Task of Feeding Hogs.

the drawing. The barrel is pivoted between two posts, securely set into the ground. This is done by bolting or screwing around the barrel a heavy iron band in which two short sections of shafting are mounted to serve as pivots. A metal spout is nailed to the edge of the barrel at the mouth to facilitate pouring the slop. A wooden chute, slanting toward the feed trough,

is extended from the barrel, and the slop is poured into this.—R. E. Deering, Clements, Kan., in Popular Mechanics Magazine.

Experience Demonstrates Fat Hen Is Best Layer

"We often hear the remark 'she's too fat to lay.' This I know to be a mistaken idea, as I have had experience (in forty-odd years) with both fat and poor hens; and have always found the fat hen to be a layer," writes William Hart Harrison in the Farm Journal.

"While it is not necessary for her to be overfat, I do not believe she ever gets too fat to lay well. The 'boot is on the other foot,' it is the poor hen that never lays well, and often not at all.

"A hen to be in the best possible laying condition must have considerable surplus fat in her body. This means that her bodily wants have been supplied, and there is some food or fat to spare. Such a hen has surplus vigor, strength and energy, which cause her to lay well. A poor hen has scarcely enough energy and strength to keep body alive, to say nothing of producing eggs. Common sense should teach us that."

Pigs Farrowed in March Will Make Most Profit

Pigs farrowed in March make the big profit, because pigs farrowed early make the best use of green pastures through the summer months and are big enough so that they can be turned into a field of corn as soon as it is ready and can be marketed off the corn by the first to middle of November. The farmer who had March pigs last year and took care of them through the summer and then had a

field or corn to turn them on early in September and who sold them between the first and fifteenth of November, weighing 180 to 200 pounds, made as much money from his hogs this year as he ever did. Keep the brood sows in a good place and get them bred early.—W. H. Peters, North Dakota Experiment Station.

Keep Ewes in Flesh

Permitting the ewes to become badly reduced in flesh is a very poor practice and one that usually causes heavy losses. As the lamb begins to draft heavily upon its dam for daily nourishment, it is necessary to not only supply additional food to maintain a steady flow of milk, but also to preserve the flesh of the mother as well. It is very natural for a nursing dam to favor her offspring and consume sufficient food to not only maintain her own system, but supply nourishment for her lamb.

Live Stock Hints

A normal, healthy pig should weigh 200 pounds when it is 200 days old.

The flock owner who is desirous of encouraging a strong flow of nutritious milk to force the lamb crop forward as fast as possible, should lay plans to supply the flock with plenty of supplementary forage.

Hogs from pasture and finished by hogging off corn shrink less in shipping to market than yard-fed hogs.

Thousands of sheep will suffer from stomach worms in spite of the fact that it only costs one cent per head for material to treat for this trouble.

LIVE STOCK

ABORTION IN SWINE MAY BE CONTROLLED

The following suggestions for the management of a herd of swine in which infectious abortion has broken out are based upon practical experience. By putting them into practice it is believed the disease may be brought under control in the shortest possible time, according to the Wisconsin College of Agriculture.

1. Remove aborting sows at once from contact with other sows and gilts.
2. Collect and burn aborted pigs' afterbirths and all contaminated feed and litter.
3. Find out whether the abortions were caused by abortion germs by having blood samples tested to detect evidence of the disease.
4. Consider the herd infected if any of the blood samples are found to react to the test for abortion.
5. Divide the non-reacting sows into as small groups as possible.
6. Disinfect the hog houses by thoroughly saturating the floor, walls and troughs with a coal-tar disinfectant prepared and applied according to directions of the manufacturer of the product.
7. Sell for slaughter grade sows which abort as soon as their condition will permit, as such animals will scarcely pay for the trouble of treatment.
8. Postpone breeding sows that have aborted until they have passed at least two heat periods.
9. Keep a special boar for the aborting and infected sows. This, of course, is impractical except in large herds.
10. Provide a clean boar for all sows that show no evidence of infection.
11. Ask your veterinarian to secure vaccine from the college of agriculture to vaccinate all open sows and gilts that have not aborted, in order to prevent them from contracting the disease.

More Careful Study of Feeding Problem Needed

A litter of twelve pigs, six and six, on one sow is a heavy drain, so B. W. Fairbanks, live stock extension specialist, told a western slope farmer who showed him the pigs, which had been sired by a pure bred Duroc of excellent breeding. They should have been weaned late in June, but were still on the sow July 10. Starting them on grain before weaning was advised; a little corn, some shorts and plenty of buttermilk and pasture for exercise. Then after weaning feed a mixture of corn, 40 pounds, oats 30 pounds and middlings 30 pounds. This should be hand-fed until the pigs get up to 150 pounds. After that a self-feeder may be used.

Another litter of eight, from a pure bred sire, was looked over. Here the problem was of another sort. These pigs had evidently been weaned too early, at seven weeks. They should have been left with the sow at least another week. They were being fed middlings and skim milk and they weighed only half a ton, when they should have been well beyond that point in order to stand any show for a ton-litter contest prize. Here the trouble was underfeeding.

"The ton-litter contest emphasizes the need for more careful study of the feeding problem," says Mr. Fairbanks.—Extension Service, Colorado Agricultural College.

Ventilation for Hogs

The average hog house has doors along the side and a cupola at the top which is supposed to take care of any necessary ventilation. Cold air coming in at the doors strikes the hogs direct and continues to pass over them in a current from door to ventilator. When the doors are shut there is no intake of fresh air, steam collects, and when the hogs go out on the feed floor they very easily take cold.

Hogs Avoid Flu

It is a striking fact that hogs following steers and sheep in open sheds are seldom if ever affected by swine "flu." Inquiries come in asking why the disease does not spread to other herds which are just across the fence. In nine cases out of ten the herd not affected is being housed in open sheds with steers or else they are in properly ventilated houses which have plenty of bedding.

Housing Live Stock

Three classes of live stock which need to be housed with special care in the Northwest states are the young pigs, young calves and the milk cow. A good stock barn should be dry, reasonably warm with a uniform temperature, well lighted, well ventilated, and sanitary.

Importance of Boar

It is important to keep in mind the fact that the boar is just as important as the sow, for the brood sow can only farrow a certain number of pigs during a year, or life, while the boar will probably sire hundreds. Especially is this true in a large herd, and the condition in which the boar is kept, especially during the breeding season, will have a very important bearing on any breeder's success in the production of pork or breeding swine.

POULTRY

DRESSING TURKEYS OF BIG IMPORTANCE

(Prepared by the United States Department of Agriculture.)

The need for taking special care in dressing and packing turkeys for market this year, in view of the abundant supplies, is pointed out by the United States Department of Agriculture. The quality of live turkeys coming to the Washington market last season was generally satisfactory, but many shipments of dressed birds showed carelessness in killing, dressing and packing, the department says. Many of the turkeys, although well-fleshed and of good quality otherwise, were poorly bled, resulting in discoloration, poor appearance and low prices.

The department commends producers and shippers who kept off the market thin or poorly developed live turkeys, pointing out that such birds could not have been satisfactorily marketed. The few weeks between the Thanksgiving and Christmas seasons will give opportunity for birds of this kind to fatten and fill out, thus making them more in demand and to bring a better price.

Some of the dressed turkeys were carelessly dressed, resulting in broken bones, torn skin and bruised flesh; others indicated a combination of defects and made it difficult to dispose of the birds at a price which they would easily have brought had they been properly dressed. The department urges that the turkeys be carefully dressed so that they reach the market in a neat, attractive appearance that will appeal to buyers.

Many of the birds which have been well handled were poorly packed. Shippers should be careful to see that the turkeys are thoroughly cooled out before packing, as otherwise conditions frequently develop that result in loss of the birds and nearly always in lower prices, the department says. If turkeys are not dry plucked and shipped under proper refrigeration, it is desirable that they be ice-packed, particularly if weather conditions indicate unfavorable changes. It is poor economy to take chances with valuable shipments, and carelessness in any of the details necessary to put the birds on the market in good condition frequently results in loss and waste all the way from producer to consumer.

The Christmas trade is problematical, but producers and shippers should realize that high quality birds properly cared for are always in much greater demand than ordinary turkeys and turkeys which show carelessness in dressing or shipping to market, the department says. Particularly when the commodity is in abundant supply, neglect of these details results in loss, inasmuch as only attractive and high quality produce can be sold to advantage.

Ventilation Is Needed for Health of Poultry

Ten hens breathe off more than a pint of water a day. Are you providing ventilation to get this out of the house, or do your hens take a continuous cold bath day and night without a towel for a rub down? Even you would get the roup under such conditions. Watch out for moisture on the windows and frost on the walls. Put in 1 square foot of thin cloth curtain to every 15 square feet of floor. Keep this curtain open whenever weather permits. Drafts and damp air and floors cause more colds than zero weather. Exercise helps to prevent colds. Light feeding in a clean, dry litter 8 inches deep induces exercise.—O. C. Krum, Colorado experiment station.

Producing Good Milk

In producing good milk certain conditions are essential. A good cow stable has sufficient light and ventilation. Sunlight is a fine disinfectant and detrimental to bacterial growth. Smooth walls make it easier to keep the stable clean, and discourage the accumulation of dust and chaff. Tight floors are sanitary and are easily cleaned and kept clean.

DAIRY NOTES

Dairy cows do especially well on sweet clover pasture.

Raising good calves properly is one way to build up a good dairy.

A well-developed heifer may be bred younger than one that has not done well. A few months in waiting to give the heifer time to grow is usually well paid for when she freshens.

Owners find in the Oakland Six speed beyond need when the open road invites—a wealth of power to pull when the grade is steep or the going hard—a purring engine when traffic drags—a flying start when the congestion clears—and perfect control at all times with four-wheel brakes.

Q Standard equipment includes four-wheel brakes, disc steel wheels, balloon tires, permanent top, Fisher Body, one-piece ventilating windshield on closed types, Duco finish, centralized controls, indirectly-lighted unit instrument panel, automatic spark control. Q Glass enclosures for open cars at small added cost.

FARM POULTRY

BREEDERS ENTITLED TO COMPLETE REST

Both the males and females in the breeding pens having fully done their duty during the summer are now entitled to a well-earned rest. It is imperative that they be permitted to fully recuperate at this time if they are to prove worthy breeders again next season. The numerous progeny departing themselves on the range is ample proof of the past labors of the breeding birds.

This strain on the fowls that comprised the breeding pens has been no small one, so we should allow them a complete rest and provide for their every comfort. It is extremely unwise to still persist, as some do, in encouraging the fowls to keep up laying by feeding stimulating foods. The breeding birds are entitled to a good rest and the conscientious poultryman will see that they get it.

The first thing in order then, is the breaking up of the pens and the separating of the sexes. The females should by all means now be freed of the annoyance of the males. It is essential to their obtaining a complete rest. The females can now be run together and given the use of the range. A range with plenty of green stuff offers an ideal place in which the hard-worked females may spend their summer vacation. Little attention need be given them, merely seeing to it that they have sufficient feed, clean, cool water, and comfortable, vermin-free sleeping quarters.

The food ration of these breeders should be such as not to stimulate production. Only two meals a day need be provided, but they should be full meals. While no surplus of food is needed for egg production now, yet sufficient quantities should be provided to enable the fowls to grow their new feathers, for molting will now be in order. And the tissues, affected by the wearing labors of production, must undergo repairs at this time, and the proper food and in sufficient quantities, are essential. When the fowls have liberal range, the animal and vegetable food secured by them will benefit them greatly.

The male birds should be penned apart and given roomy pens, so they may obtain the necessary exercise. If it is possible to arrange it so the males can also have the use of the range, it will be just so much better for them. It is always good policy to take the very best of care of the male, as he is always half of the pen. We have only one male where we have ten or more females. When we lose a good male we lose half our pen and often more—very much more—for often a male as good in every respect cannot be secured to replace him. Therefore it will readily be seen that to lose a good pen header for any reason is to sustain a big loss. A little extra pains exercised in the care of our pen headers, after the breeding season is over, will be time and labor well spent. It is preferable to have small runs for each male and have the runs covered with some suitable material to protect the plumage from the sun and weather.

It is a good plan at this time to cull out the less desirable hens. With the hens kept for laying purposes only it is a good plan to cull out those that have had their second laying year. It is seldom that they prove profitable after this when kept for laying only.

Eliminate Early Molter From All Laying Flocks

The beginner with poultry soon finds that there is a time in the fall when the egg returns become very low and often it is just the time when feed bills are high and he wishes to buy all feed not raised on the farm and stack it up for winter. This period of slack production usually occurs somewhere between August first and December first, and the length of time it lasts depends on the skill of the poultryman. Why do the egg returns fall at this time? Because there are too many early molting hens in the flock which have ceased producing eggs. And the pullets are not the early hatched birds that lay in the early fall and keep it up throughout the winter.

Must Produce Eggs

To be most profitable a flock must produce eggs the year around, in winter as well as summer. There is small profit in summer eggs, but when they get up to top-notch winter prices there is a handsome profit in them. The flock that does not produce a reasonable number of eggs during the period from November 1 to April 1 of each year is often kept at an actual loss for the year, as it is almost impossible to make an annual profit from the flock that lays all its eggs when the market is sagging.

Means of Ventilation

If no means of ventilation are provided it is a good plan to remove several panes of glass from the windows in the south side of the poultry house and replace with cheesecloth or unbleached muslin. Fresh air is admitted through the cloth and the stale air from the inside is permitted to escape. These cloth-covered openings do not lower the temperature of the interior of the building. Some contend that the house is warmer when arranged in this way.

Apple Growing East of the Mississippi

Fundamental Principles Discussed in Bulletin.

(Prepared by the United States Department of Agriculture.)

The fundamental principles of apple growing are discussed in a new bulletin just issued by the United States Department of Agriculture which treats in particular of apple growing east of the Mississippi river. The fruit grower, says the department, who best understands the principles involved and applies them wisely is the one who usually succeeds because he best meets the conditions of nature with which he contends. There is no "rule of thumb" method of procedure which can be laid down to fit all localities and conditions.

From their inception, says the department, many orchards are doomed to failure or to mediocrity of success only, because they are poorly located with respect to soil, local temperature conditions, or for some other reason which is inherent in the surroundings and which might easily have been avoided had the principles of good orcharding been observed in the beginning.

With the high costs that enter into the development and maintenance of apple orchards, any advantages of site and location and of favorable conditions with respect to regularity of crops, abundant yields and perfection of development of the fruit may make a wide difference in the financial aspects of an orchard enterprise, as compared with one where adverse conditions occur.

The aim of Farmers' Bulletin 1360 is to help the grower in meeting some of the problems of apple orchard planting and maintenance. A copy may be secured upon request, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.

Dairy Products Perfect and Economical Food

It has always been known that milk and other dairy products were very healthful and economical foods, but these facts were not fully realized until scientists made their startling discoveries, within recent years, concerning those mysterious substances known as vitamins, which are contained in milk, butter, etc., and which are absolutely essential to the growth and health of the old as well as the young. Milk and other dairy products are the most perfect of all foods, and the dairy cow is the most economical producer of such food.

Various agencies and organizations, such as the United States Department of Agriculture, national, state and local health organizations, doctors, nurses, etc., the national dairy council and many commercial organizations, have given these facts enormous publicity and advertising, and have educated the public to a greater appreciation and knowledge of the value of dairy products.

Most Important to Keep Sheep Free From Worms

It is most important to keep sheep free from tapeworms. These worms come from ripe segments dropped by infested sheep on the pastures so that old, or permanent pastures soon become tainted for sheep. Lambs should, so far as possible, have new, clean grass to go on each spring and before turning the ewes and lambs out to grass the ewes should be treated to free them of worms, especially stomach worms (strongylus haemonchus). When sheep are known to be infested with tapeworms starve them for 24 hours, then give each sheep one to two drams of freshly powdered kamala, washed down with water. After administering the medicine turn the sheep into a pen on the floor of which slaked lime has been spread to the depth of one inch or more. Keep the sheep there for 24 hours.

FARM FACTS

Pull out and burn all bean vines infested with rust.

Give special feeding and attention to hogs to be shown at fairs.

The successful dairyman must weed, feed and breed, and keep continually at it.

The average American cow gives but half of the milk of the average cow in Denmark.

Whitewash looks good on the outside of poultry houses and pig pens, but on the inside it does good.

Testing cows is a good deal like matrimony from the man's viewpoint—you always get the best results if you humor every whim.

A bookkeeping system of the farm is like a speedometer on the flywheel; it tells you how fast you're going and lets you figure the costs.

A high producing dairy cow, or any dairy cow for that matter, should never be forced to drink water below a temperature of 55 degrees.

Don't let the woodlot be used as a grazing ground. The feet of the cattle bruise the roots at the base of the trees and this gives entrance to insects and disease spores.

LIVE STOCK NEWS

CAREFUL SELECTION OF BOAR IMPORTANT

The growing of a young boar to maturity is one of the most difficult tasks for the breeder. So difficult is this task that there is not more than one boar in a hundred that ever lives up to the expectations of the breeder. For this reason it is best to cull the male pigs very carefully and keep only those which show exceptional promise, suggests Prof. L. V. Starkey, chief of the animal husbandry division at Clemson college, who adds that it should be kept in mind that the boar is half the herd.

Breeders usually lose money on the boars which they grow out. Therefore, it is better to dispose of them at four to six months of age. Boar pigs usually start to grow off very nicely. When they get to be from four to six months of age they frequently go off feed, go down in back and pasterns, and in a short time do not look like the same individuals.

The best way to grow out a young boar is to put him by himself in a field. The larger the field the better, because he needs exercise, shade, fresh water and shelter. If there are no other hogs in the same field, he usually has a quiet disposition. If other hogs are in the same lot or in an adjoining field he usually develops a nervous temperament and does not do well.

If boars are to make the best growth and develop, says Professor Starkey, they should not be used until they are a year old. However, if needed in the herd, they may be used for light service when seven or eight months of age.

The best breeding boars should be retained in the herd as long as they are able to reproduce. It will, of course, be necessary to have two boars to avoid inbreeding. Those who have only a few sows cannot afford to keep two boars—either they must dispose of the sow pigs or secure a new boar, and the latter is usually done.

Vaccinate Little Pigs for Proper Protection

In immunizing against hog cholera it has been assumed that suckling pigs were generally immune and that the time to vaccinate was immediately after weaning. That suckling pigs do possess a considerable degree of immunity no one will deny, but occasionally the losses are so heavy that the question of treating sucklings has been receiving serious consideration. The simultaneous treatment of suckling pigs is attended with considerable loss and does not provide a lasting immunity in all cases. To overcome these difficulties, Dr. R. R. Birch recommends serum alone to protect the pigs until they are twelve weeks old, at which time they may be weaned and given the double treatment. This method will provide for the smallest possible loss and at the same time will insure the highest degree of lasting immunity.—Geo. H. Glover, Veterinary Department, Colorado Agricultural College.

Oats Best for Cattle

Oats may usually be more profitably fed to cattle than to hogs. They should not be worth more than half the price of corn if they are to be fed to hogs at a profit. Whether they can be fed to hogs at the present time when they are worth 50 cents per bushel is a question which we will not dare to answer because we do not know what prices are going to be when the time to sell arrives. Oats should not make up more than a third of a ration in which corn or barley is used.

Ground Grain for Pigs

Ground barley and oats are quite an improvement over the whole dry grains. Possibly the pigs will eat the ground grains a little better if soaked, but usually it is not necessary to soak in addition to grinding. Pure bred pigs raised for breeding purposes should weigh 140 to 160 pounds if they have been fed well, but not pushed for show. Pigs that are to be shown can weigh close to 200 pounds when five months of age.

Hogs Require Exercise

During the summer hogs out on pasture get plenty of exercise. However, in the winter when hogs are likely to confine themselves too closely to their quarters, this may be sadly neglected. Some success has been obtained by arranging sleeping quarters some distance from feeding quarters. This method may not always be practical because where centralized houses are used the two may be closer together, or even in the same building.

Rape Cause of Blister

White hogs, and sometimes black and red ones, blister when running in rape. There is nothing peculiar about this crop which causes blistering; the trouble results simply from the combination of moisture, transferred from the rape to the hog, and a hot sun. By keeping pigs out of the rape patch until the dew or rain has evaporated from the leaves of the plants, blistering can be prevented. Even a small patch in a feed lot will save grain in raising pigs.

White Holland Turkeys

The smallest of the breeds of turkeys is the White Holland, which is growing in popularity.

The White Holland, as its name implies, is white. It is a very attractive bird; stands confinement better than the Bronze and is said to be a better layer under ordinary conditions.

The standard weight of the White Holland tom is 26 pounds, though many weigh more. Sixteen pounds is the standard weight for the hen.

FARM NOTES

Egg-laying contests stimulate interest in egg production.

Young chickens need plenty of ventilation and clean water.

The only advantage of a scrub cow is that it doesn't take so long to milk her.

Careful dairymen have found that warm and cold cream never mix satisfactorily.

When the milk scales come into the milk house, boarder cows go out of the barn door.

Buy a purebred bull early in the fall so that you may breed your cows during November, December and January.

A farmer who doesn't keep good family dairy cows should consult an alienist to find out what is wrong with himself.

Special attention is now being given to the vitamin content of eggs and their fertility and hatchability as affected by rations.

The external condition of the cow is a most important factor in the production of clean milk, and dirt on the outside of the animal's body is one of the greatest sources of milk contamination.

Abundance of pure air for the dairy cows is fully as important as a full-balanced ration. There may be times when it is impossible to supply the full-balanced ration, but never is it impossible to secure an abundance of pure air.

All milking utensils should receive careful attention. They should not only be thoroughly washed and scalded, but they should also be set out in the open where they can be further sterilized by the direct rays of the sun.

Watch your sheep carefully to see that they do not become infested with worms.

Tip to dairymen: Proper feeding means cheaper milk and, therefore, more profit.

Cattle, horses and sheep as well as hogs are fond of hay, but they cannot be expected to eat the coarse stems.

Colts, calves, lambs and pigs, all should have special feed set apart for them as soon as they can be coaxed to eat. Oats are very good.

Hogs with cholera often have diarrhea after they have been sick a short time. Pus may form in the eyes. Red or purple blotches come on the skin of the belly inside the legs.

"Pennsylvania Dutch"

The idiom of the Pennsylvania Dutch is really high German. It is a fusion of Franconian, Alemannic and other German dialects, with an admixture of English varying from 1 per cent in rural districts to a large percentage in towns.

He Took His Encore

It was little Ruth's first visit to the farm. She was watching a meadow lark in an adjoining field and listening to his song. In a little while she entered the house and told her aunt about it. "He wasn't a bit afraid," she said, "he just looked at me and then turned round and sang another verse."—Boston Transcript.

"COLD IN THE HEAD"

is an acute attack of Nasal Catarrh. Those subject to frequent "colds" are generally in a "run down" condition. HALL'S CATARRH MEDICINE is a treatment consisting of an Ointment, to be used locally, and a Tonic, which acts quickly through the Blood on the Mucous Surfaces, building up the System, and making you less liable to "colds." Sold by druggists for over 40 years. F. J. Cheney & Co., Toledo, O.

Administrator. 47-1f.

**TO INSURE CROP OF VIGOROUS LAMBS**

Breeding ewes which are in good condition in the fall need little or no grain in winter until about a month before lambing, if given all the bright legume hay they will eat with an allowance of silage or roots in addition, writes Dorsey McAtee in the Prairie Farmer. At this time or earlier, if they are not in thrifty, vigorous condition, they should be given a limited amount of concentrates up to one-half pound per head with roughage.

The best roughages for ewes are the legume hays—clover and alfalfa—which they like and are rich in protein, and help ward off constipation, a serious danger of the ewe. Other roughages useful to feed with legume hay are bright corn fodder and oat straw which has some hay in it. Timothy hay is too constipating for ewes.

To insure a crop of strong, healthy lambs, exercise for the ewes is essential. They should have access to a dry, sunny yard, well protected from wind and storm, and on all fair days should be forced to exercise by scattering roughage over a nearby field. When the snow is deep, paths should be broken out with snow plow or stone boat. On stormy days the sheep should remain indoors.

To avoid udder troubles, ewes should be given but little grain for two or three days after lambing, and the allowance gradually increased with the demand for more milk by the lamb. With good roughage, not over two pounds of grain per ewe daily is necessary. After being turned to pasture the ewes need no additional feed, if grazing is good.

In about 147 days or five months after the ewes are bred the lambs may be expected. It is wise to be close at hand during lambing time to assist the ewes or any weak lambs. Pens should be provided for the ewes and their newly born lambs. Here each ewe and her young may remain for a couple of days until they are wanted to each other and the lambs are strong enough to look out for themselves among the flock.

POULTRY FACTS**RAISE POULTRY FEED BY HAVING TWO LOTS**

When open range is not available and hens must be confined, we recommend the division of the hen yard into two lots, so that green food can be grown on one side while the other patch is being grazed. As soon as the green stuff is two or three inches high the hens may be turned on it, while the other lot may be prepared and sowed again. This plan provides plenty of green, succulent feed throughout the year for the average farm flock. Sooner or later we will have two or more such lots fenced in on our farms, with the hen house so placed with reference to convenience for the caretaker. Lots containing an acre or more, divided by fences, and large enough to provide considerable pasturage for the family cow and a growing heifer are very desirable for growing farm poultry. The pigs should not be turned in, however, for as a rule pigs and chickens do not go well together.

There are times when the poultry do some harm to some of the crops at or soon after planting time, but after they have a good start this is not very often the case. Take corn, for instance, after it is a foot high and from then on it is hard to find a better run for poultry. They help work the crop, destroy insects, and the corn in turn furnishes the much-needed shade. Hawks, by the way, can do little harm to birds on range in a corn field.

The green crops to be grown should be suited to local conditions as well as to the proper time to plant in order to have a succession of green crops throughout the year.

There are times when these lots should not be grazed too closely, but allowed to get a fresh start, so here is where the other yard comes in play. Birds can be shifted from one to the other, thus saving both pasture lots much longer.

Thickly sown crops furnish succulent feed and summer shade.

From April 1 to July 1 on growing yard 1—Oats, chard or lettuce, clover or vetch, sunflowers, cowpeas, rape. For feeding purposes on yard 2—Winter rye, winter vetch, sweet clover and various other green clover crops.

From July 1 to October 1 the oats, chard and lettuce, clover and vetch, cowpeas and rape on yard 1 may be fed, while buckwheat, dwarf Essex rape and flat turnips are grown on yard 2.

From October 1 to April 1 the growing crops on yard 1 should consist of oats, winter rye, winter vetch, sweet clover and crimson clover, while at the same time yard 2 could be growing buckwheat, dwarf Essex rape, flat turnips and soy beans.

We, in this state, are blessed with a climate that makes it possible to have some green pasturage crop growing at all seasons. It is one of the very best and cheapest foods for our poultry as well as other live stock.—Allen G. Oliver, in Charge, Office of Poultry Extension, North Carolina State Agricultural College.

Proper Plan of Packing Will Prevent Breakage

Careful packing prevents breakage in market eggs. The poultry department of the New Jersey experiment station recommends this plan of packing. First, place an excelsior pad in the bottom of each compartment of the crate. Directly upon this pad place a filler and fill with eggs as usual, packing the eggs small end down. If no flat is placed over the pads, the eggs will bed themselves in the excelsior and ride safely. Three layers should be packed as usual, alternating flat and filler, with an excelsior pad instead of a flat on top of the third layer. Continue to fill the crate, using filler, flat and filler. On the top use an excelsior pad with no flat.

Pullets in Quarters

The reason some pullets are late in laying in the fall is because they get started wrong in their winter quarters.

Pullets should be established in their winter quarters before the egg organs are developed; otherwise a change of house disturbs them and interrupts the egg yield.

Separate Late Molters

Late molting hens should be separated from the pullets about ready to lay. These hens have performed well and now need plenty of fattening feed to build them up ready for early spring laying. Eggs from these hens will be valuable for hatching and should be reserved for that purpose.

Sell Old Hens Early

Pullets make the most profitable layers. Hens are always a good price if sold just before the breeding season is over, but they drop fast when farmers are selling their stock after they drop down in production. Eggs at this season are low in price, and it will pay to sell two or three weeks before they stop laying rather than risk a sudden slump in price. Feed heavily of corn for a week or ten days before you sell, and keep off free range.

Statesman's Requisites

A statesman requires rather a large converse with men, and much intercourse in life, rather than a deep study of books.—Burke.

NOTICE OF ASSESSMENT

Office of the Stapleton Oil Company, Kendrick, Idaho, August 25-1924.

Notice is hereby given that at a meeting of the directors of the Stapleton Oil Company, held in Kendrick, Idaho, August 12, 1924, an assessment of 5c per share was levied upon the outstanding stock of the corporation, payable on or before September 25, 1924, to G. F. Walker, Secretary, Kendrick, Idaho.

Any stock upon which this assessment remains unpaid, on September 25, 1924, will be delinquent and advertised for sale at public auction, and unless payment is made before, will be sold at 7:30 p. m. at the office of G. F. Walker, October 25, 1924, to pay assessment thereon together with the cost of advertising and expense of sale.

G. F. Walker, Secretary.

NOTICE OF POSTPONEMENT

Notice is hereby given that by order and resolution of the board of directors of the Stapleton Oil Company, Inc., the time for payment of the above assessment has been extended from the 25th day of September 1924, to the 15th day of November, 1924, and the sale of delinquent stock has been postponed from the 25th day of October, 1924, to the 25th day of November, 1924, at 7:30 o'clock p. m.

G. F. Walker,
Secretary Stapleton Oil Co., Inc.

Annual Dinner and Bazaar

Saturday, December 6

The Methodist Ladies Aid will have their Bazaar and Chicken Dinner on Dec. 6, from 6 to 7:30 P. M. Fancywork on sale afternoon and evening. Let us help you with your Christmas shopping. We will have aprons for women and children. Luncheon sets, pillow slips, centerpieces, doilies, and other articles too numerous to mention. Next week's paper will tell you where.

Remember the Date!

The Pleasure of Drawing Interest

On the semi-annual interest days there is a happy throng of savings bank depositors who come here to have their interest added.

There is a pleasure in drawing interest—to know that your money is making more money for you.

Receiving an income from your savings is just one of the many satisfactions connected with a growing savings account. Your funds are safe from fire and theft, you watch your saving grow week to week and month by month and as your account increases your interest payments increase also.

Why not open a savings account and lay by some money for the future? One dollar or more opens an interest bearing account at this bank. We welcome the accounts of children. Let the children learn early how to do business at the bank.

Don't forget the chicken supper at the Elwood school house, Saturday evening, November 22.

Mr. and Mrs. Elmer Anderson were caller at Harry Baker's, Saturday.

Mrs. Dora Anderson spent Sunday with her sister, Mrs. M. L. Pierce.

Careful Culling Will

Improve Egg Production

T. S. Townsley, poultry culling specialist at the college of agriculture, University of Missouri, says that since pullet culling is based upon estimates of the future production, while hen culling is based upon characteristics which indicate past production, pullet culling is not so much of an exact science as is the culling of hens. He adds that much can be done, however, toward improving the average production of the flock, by carefully culling the pullets before the laying season starts, using as a basis the rate of maturity, general vigor, quality, and laying type.

Don't miss the big turkey shoot next Monday Nov. 24. at Kendrick. 47-1t.

Tuesday, Nov. 25

A big, get-together meeting at the Kendrick Methodist church next Tuesday. Out-of-town speakers; light refreshments. You are cordially invited to come for a good time.

The Kendrick Store Company

French Reign of Terror

The Reign of Terror was that period of the French revolution beginning with the fall of the Girondists in June, 1793, and lasting until the overthrow of Robespierre, July 27, 1794. During this time the country was under the domination of a faction which carried on wholesale executions regardless of age, sex or position.

In Good Queen Bess' Time

Scratch-backs were considered good form in the time of Good Queen Bess, and were carried and used by milady both at home and abroad. They were made ornamental as well as useful.
