

LEAGUE MANAGERS' OUTLINE PLANS

Valley and Central Leagues To Start Sunday, April 15.

Herman Schupfer, member of the baseball executive committee for Kendrick, and Manager Ira Bolon went to Lewiston, Tuesday to attend the meeting of the representatives of the Valley and Central league teams. Following is a resume of the meeting as published in the Lewiston Tribune:

Plans were completed for the start of the Central Idaho and Valley leagues Sunday, April 15, and a player rule was adopted which limits league teams to entirely local players except two, who may be secured from anywhere, at a meeting of league directors Tuesday. Salary limits on outside players cannot exceed \$175 monthly.

Adoption of the player rule was made after several other propositions were made and the vote was seven for, to three against, for the ten teams represented at the meeting. Nezerperce, Lewiston and Clarkston opposed the new rule.

Election of Loyd Harris as commissioner of the league was unanimous, to settle all disputes as to player eligibility, disputed games and matters not covered by the rules.

Uniform contracts will be made by the league to be sent to each manager, and all players in the league will be required to sign them 10 days prior to the start of the season. When a player is signed he may not be approached by another manager with a proposal for a change. He can only be released on consent of his manager, except that he has the right to appeal for his release to the commissioner in case the manager does not willingly release him when there appears to be a reason for the release.

A new rule was adopted providing for holding a player from season to season by the teams of the league. The D. & M. baseball, sold by Cliff Stump of the Erb Hardware company was adopted as the official ball for the league, and it was understood that this company would offer a cup for the championship team at the end of the season and for the tournament.

The double umpire system as used last season will be in force again this year with the stipulation that the visiting umpire will umpire balls and strikes and the home umpire will work on bases in each game.

The contracts of the players must be in by April 5, ten days before the opening of the season and the two outside players permitted to each club must be signed by that time and their contracts will hold good for the remainder of the season, no changes being allowed for these two men. Changes on local players may be made each week with five days' notice before the game in which the player is to be used, according to the old player rule.

No attempt was made to decide on a schedule, and the matter of the Fourth of July tournament was deferred until later in the season. The schedule will be worked out by a committee headed by the secretary.

All of the teams were represented by director or manager except Lapwai and Grangeville, and the proxy of the Grangeville team was given to the secretary.

Fire Alarm False

The fire siren sounded last Sunday evening and quite a crowd gathered at the Vollmer-Clearwater warehouse, where it was reported that the west end of the warehouse was burning. It was a false alarm and was occasioned because of the reflection of the fire in an N. P. engine on the side track, which lighted the cliff near the warehouse. The hose cart was at the scene in short order and all preparations made to fight the fire before it was discovered that it was a false alarm.

Moscow Votes School Bonds

By a vote of 1150 to 301 the \$100,000 school building bond issue carried Moscow independent district Tuesday afternoon, says the Star-Mirror.

Vote was the heaviest known upon a similar question in the city and one of the heaviest ever cast here except at general state elections, and then exceeded only by small margins. Tuesday's vote was limited to taxpayers and parents or guardians of minor children who come within the state franchise laws.

Passage of the bond issue provides a new 11-room grade school building on the site of the present Irving building, doomed to demolition. The building will be two stories in height with a basement under the center portion. Passage also provides for complete renovation of the high school heating and ventilating plant, which has not functioned in recent years; construction of two new dressing and shower rooms for gymnasium classes in the high school; reflooring the Whitworth building; conversion of two basement classrooms into an assembly hall and general renovation of the building.

Will Distribute Estate

The \$12,000 estate of Mrs. Susanna Giese, who died at Juliaetta, February 8, will be distributed to her children, according to her will, which was admitted to probate at Moscow, Monday. Herman E. Giese, her son, was named executor of the will.

The estate comprises approximately \$3,000 in real property. The heirs were named as follows: Mrs. Charles Austen, George M. Giese, Julius H. Giese, Jr., and Adolph K. Giese, all of Juliaetta and Susan K. Giese, Alfred E. Giese and Carl M. Giese, all of Genesee.

Letter From The Hulls

Yesterday we intended to attend the picnic given at the park for former residents of Idaho, but it rained the night before and Mrs. Hull had taken cold, so she was unable to go. James Emmett and I went out to see if there were any of our friends from Idaho there. The attendance was fairly good, but we could find no one whom we knew, so concluded to take in the revival services at a tent where Gipsy Smith was to officiate. The tent was about 250 feet wide and extended full length of the block. We arrived half an hour before time for the service. The tent had three entrances but we were unable to get near any of them as the tent was already full to overflowing. We remained there nearly an hour and people continued to come and were turned away by the hundreds. This again demonstrates what advertising will do. All the churches by means of the newspapers and streamers across the streets had been advertising the meeting for over a week.

We intend to start home about the sixth of April, making a short stop at Ashland to visit Mrs. Vincent, widow of a former publisher of the Gazette, and at Berkeley to visit a nephew. We may spend a day in Portland and shall be glad when we reach Kendrick again.

All the Kendrick people residing here are well. Mr. and Mrs. James Emmett, Mrs. Hull and myself are invited to have dinner with Mr. and Mrs. Blackburn, Thursday.

Best regards to all.

H. P. Hull.

Horse Sale Draws Crowd

The auction sale of horses here Tuesday afternoon, drew a large crowd. The horses sold well, considering their condition. They were thin and not in shape to be put on the market.

A dance will be held at Juliaetta tonight for the benefit of the Juliaetta ball team. The "Julietta Pepstes" will furnish music for the occasion.

Girl Designs Shakespeare Memorial

Miss Elizabeth Scott, daughter of a Bournemouth (England) doctor, in her studio. She has been selected as the architect for the new Shakespeare Memorial theater at Stratford-on-Avon, which will replace the theater burned down in 1926. She is but twenty-nine and won her honor in the face of much competition.

Keeler-Smith Marriage

Miss Olive Mae Keeler and James E. Smith were united in marriage at Spokane, Wednesday, March 7. The wedding was a surprise to the many friends of the young couple in the Linden community, where they were childhood friends. Dr. J. E. Hoyt, formerly of Kendrick, witnessed the ceremony.

Olive is the oldest daughter of Mr. and Mrs. Charles Keeler of Linden. She attended school in Kendrick for a number of years. James is a corporal at Fort George Wright, where he enlisted the 13th of last December, after serving three years at Honolulu. He is a brother of Miss Eva L. Smith of Linden.

The best wishes of the community will follow these young people, for a happy future.

Juliaetta Has Fine Dance

The dance at the Fraternal Temple last Friday, given by the Juliaetta baseball club, was well attended and a splendid time was reported. About the same number of tickets were sold for this dance as at the one put on two weeks before by the Kendrick club. The two teams may alternate on a series of benefit dances this spring.

Has Local Tractor Agency

Will Stump has taken the agency for this territory for the Holt Caterpillar tractor. He expects to unload a shipment at Juliaetta this week, where they will be on inspection.

Commercial Club Meeting

Last Tuesday evening the regular meeting of the Kendrick Commercial club took place in the dining room of the hotel. Routine business occupied a greater part of the session, although several matters of interest were brought up.

The highway committee reported on the status of the proposed bond election, to the effect that the last sad rites had been performed last Saturday at the protest meeting, to kill and bury the road program of the Kendrick highway district. It was decided to let the "remains" rest in peace.

Dr. Morehead made a suggestion, which, if followed up, will do much to improve the appearance of Kendrick. He called attention to the many dilapidated barns and sheds in town and asked the club to take some action to have some of the worst of them either torn down or put in better condition. Kendrick could be made a beautiful little town if a general clean-up and paint-up campaign along this line were carried out. Chairman Dammarrell appointed Dr. Morehead and Marvin Long as a committee, giving them the privilege of selecting a third member, to take charge of this matter.

After a general discussion of affairs pertaining to the welfare of the town, the meeting adjourned.

Jack Barnes went to Spokane Tuesday afternoon where he expects to spend the week on business.

Porcupines Destroy Trees

Porcupines, described in a forestry report from Ogden as a menace to young trees, are destructive to old trees as well, Guy Mains, Boise forest supervisor, said Saturday. During 1927, more than 400 of the quilled animals were killed in the Boise forest by rangers while in the Weiser area 700 met death at the hands of tree guardians.

For some reason, people have the idea that porcupines are protected "because of their value as food as to men lost in the woods." The chances of sustenance on raw porcupine did not appeal to the forest supervisor, who said the practice originated among the Indian tribes.

The porcupine does a thorough job of his tree work, commented Mains. When he begins destruction to a tree, he climbs to the top and works down, stripping all the bark. If snow covers the ground, the animal probably will eat only a foot or two of the tree's covering, but it is enough to kill the tree.

A bill to authorize county treasurers to pay a 50-cent bounty for all porcupines killed was enacted by the state senate in 1927, but was killed in the house. —Blk River News.

Road Program Killed Saturday

The protest meeting last Saturday afternoon was attended by a fairly large crowd of road boosters and others. The protest was read by G. F. Walker, secretary of the highway commissioners. Frank L. Moore of Moscow, attorney for the district, suggested that an expression of opinion from those present might be of value to the commissioners before they made their decision as to the disposition of the protest.

John Woody moved that the allocation of funds as outlined in the protest be adopted as a road program. The motion was carried by a vote of 21 to 13, thus demonstrating sufficient opposition to make such a proceeding inadvisable. George Davidson then moved that the program outlined in the original petition and also the one outlined in the protest be "put on the shelf," and that committees be selected from each ridge and from Kendrick for the purpose of outlining a new program for the district. The motion was carried unanimously.

The commissioners then went into executive session and annulled the proceedings. The bond election was, therefore, automatically killed.

With the sentiment existing in certain parts of the district that the money derived from a bond election should be distributed according to the assessed valuation of the various natural divisions, there is little use to consider an attempt to adopt a road program that is sound from an economic standpoint. With the limited funds that might be available, scattered over the entire district, little permanent road improvement might be expected. Any policy that loses sight of the probability of eventually securing state maintenance of the main trunk line road thru Kendrick to Deary, is a shortsighted policy and deserves slight consideration. Until the people of the district are willing to stand behind such a program, with their own individual interests in the background and the interests of the entire district in the fore, there is no hope for a successful road program in Kendrick highway district.

Circle Entertains W. O. W.

The members of the local Circle entertained the Woodmen lodge at the Fraternal Temple last Wednesday evening. A very enjoyable time was spent. After a short program cards furnished amusement until a late hour, after which refreshments were served.

Rev. C. D. Bell of Moscow was a Kendrick visitor Wednesday of this week.

NEWS NOTES FROM THE KENDRICK SCHOOLS

What The Students Are Doing This Week.

The seventh and eighth grade pupils have elected Edna Bolon as their news reporter for the next four weeks.

Elmer Frazer has been absent from the seventh grade for over two weeks on account of blood poisoning in his leg.

Our room is now trying a new way of spelling. On Monday words that are to be the spelling lessons during the week are pronounced. Those that get 100 that day do not have to spell until Friday when all the words are pronounced as a review. This way each pupil gets one grade for all the week. On Tuesday the words missed on Monday are pronounced; On Wednesday those missed on Tuesday and so on until everyone has spelled every word correctly. In this manner the child does not have to spend time studying the words he knows how to spell and can spend more time on the hard ones. Usually by Thursday every word has been spelled correctly and there is no spelling lesson that day.

Lizzie Jones will entertain the members of the Senior Class and their guests at a St. Patrick's party at her home Saturday evening.

The students of the public expression class have started the third of their series of orations given by Mr. Tenny. This is the last group and is called "The Speaker."

The debate last week was won by Lizzie Jones and Gerald Ingle.

Spring time is here and as usual its coming has not been without effect upon the high school students. The results seem to be most evident in the two Latin classes, and as a stimulus to the lagging pupils, Prof. Tenny has arranged for a third class after school hours. He believes that this arrangement will serve successfully as an antidote to that age-old malady "spring-fever."

The general history class will have a debate this Friday. The boys of the class will endeavor (not vainly, they hope) to prove that "Male is the master of the human species," and the girls will attempt to prove that "Female is the master sex." The girls will have ample opportunity to display their debating powers. If they win it will indeed be a victory.

Those in the first grade making 100 in spelling every day last week are: Myrtle Humphrey, Ethel Fraser, Doris and Georgia Garoutte, Quentin Dammarrell, Dick Carlson, Harry McNeal, Helen Gardner, Jimmy Kuykendahl, Quentin Perryman. Those in the second grade were: Nancy Riley, Jewel Cummings and Phyllis Thomas.

The first graders have started a new reader. This is the fourth so far this year. They hope to read another one before school is out.

The second grade is finishing the Free & Treadwell second reader. This is the third book for the second grade this year.

High Water Here Sunday

Potlatch creek went on the rampage Sunday for the third time this winter, doing considerable damage. While it is stated that the creek was four inches lower this time than at its highest stage last November, it did more damage.

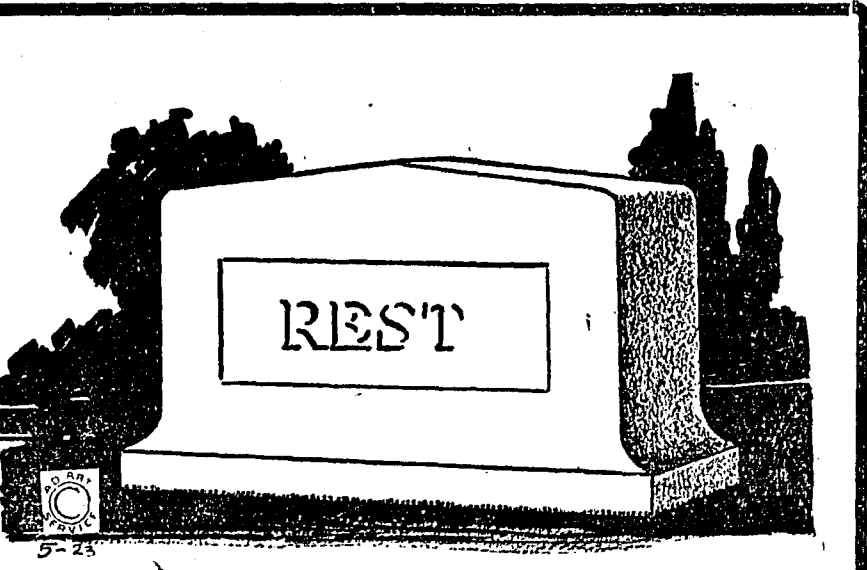

Long's slaughter house, which was located at the lower end of town near the creek bed, was washed down the Potlatch as far as the James place. The corral fence was also washed away.

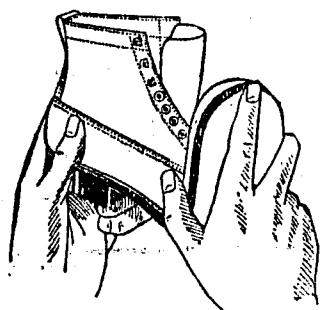

The creek in Brady gulch was also at flood stage and filled the roads at the mouth of the gulch with several feet of rock. The Brady gulch grade was washed in several places but not seriously damaged.

In Memoriam

Kendrick Highway District's Road Program

lies under this stone
Gone, but not forgotten

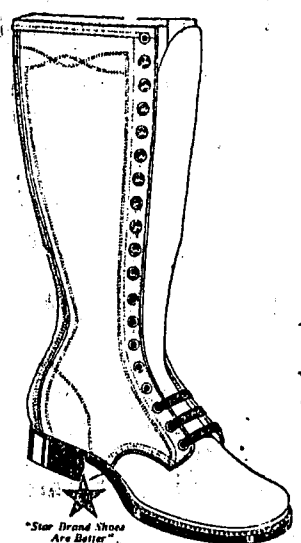

It's a "Star Brand"

"SOFT and GOOD"

UES, folks, the name of this shoe is "Soft and Good," and it is true to its name.

The soles are flexible oak, Goodyear welt sewed. There's no tacks or threads to hurt your feet. The uppers are soft and pliable, yet strong and sturdy, and will stand lots of hard service.

"Soft and Good" shoes are put out by the makers of "Star Brand" shoes—and that means they are *solid leather* and cost you less per month.

Fair Board Held Meeting

Whitman-Latah County Fair Board Directors held their regular monthly meeting in Colfax, Wednesday, March 7. They took lunch with the Colfax Chamber of Commerce who turned the noon hour's program over to the Fair Board of Directors. Several short talks were made by directors and business men of Colfax. The Fair Board of Directors met in executive session in the Farm Bureau office immediately after lunch. Perhaps the most important business accomplished was establishing the premiums for community exhibits. It was decided to put up \$30.00 for each community exhibit, this money to be divided among the communities on the basis of a total score. This insures that each community will at least get expenses for the work in putting on the community exhibit, something that has heretofore not been possible. If 10 communities exhibit, there will be \$300 put up for this premium. The Farm Bureau will put up two banners for the first and second best community exhibits.

\$70 was put up for the high school exhibits, first place \$25.00; second place, \$20.00; third place, \$15.00; and fourth place, \$10.00. In Sewing Club work, the Fair Association put up \$7.00 for each sewing club exhibit of credit, with a silver cup for first place and banners for second and third places.

In Canning Club work, \$7.00 was put up for each canning club exhibit with banners for first, second and third places.

The Potato Club and livestock judging premiums remained the same as last year.

It was decided to secure the advertising and special premiums at a very early date—within the next two or three weeks.

The next meeting will be held about the 10th of April at Tekoa.

Need of Early Diagnosis

In co-operation with the National Tuberculosis Association, the Latah County Anti-Tuberculosis Association is this week endeavoring to call to the attention of every citizen of Latah County the need of an early diagnosis when those symptoms appear which are recognized as the fore-runner of tuberculosis and to impress upon him certain facts concerning this disease.

No man can be cured of tuberculosis without his consent. He must consent to an examination by a physician, that the disease may be discovered; and then he must consent to follow the prescribed course of treatment for a sufficient length of time that the disease may be cured. The earlier the discovery is made, the more certain the hope of cure.

What is true in the individual case is true of the mass. As early diagnosis becomes more frequent, the mortality from the disease declines.

The aim of our campaign is twofold, first to focus the attention of the public upon the danger signs of early tuberculosis and to urge them to go to their doctor for examination; and second, to stimulate renewed interest on the part of the medical profession in the recognition of early signs of tuberculosis.

The "early diagnosis" campaign is to be a search for that large group of people who have tuberculosis and do not know it. How many are there? It is impossible to say. The number is changing from day to day. Persons continually leave the group to become known cases and others are simultaneously added through imperceptible activation of the disease.

Watch for these danger signs:
—too easily tired.
—loss of weight.
—indigestion.
—cough that hangs on.
Let your doctor decide.

Linden News

Miss Mae Enger arrived from Lewiston, Monday, to visit her sister, Mrs. Arthur Bohn.

The Hunt, Weaver, Lockheart and Abram families spent a very pleasant evening with Ed Fongburg, Saturday evening.

Twenty-one of the forty-three pupils enrolled in the Linden school earned a quarter day holiday Friday for perfect attendance during the month.

W. Weyen met with an unfortunate accident by getting his finger badly cut while sawing wood with a buzzsaw Wednesday.

Mr. and Mrs. Ed Kent and Mr. and Mrs. W. Weyen and sons spent the week end in Lewiston. Mr. and Mrs. Edgar Bohn spent Sunday evening at the C. H. Fry home.

George Smith and Chas. Enger attended the dance at Park Saturday evening.

Entertainment Next Friday

An entertainment will be given at the Fraternal Temple, Kendrick, next Friday evening, by the members of the Juliaetta 4H Club girls. The program will include three plays and other entertaining features. After the program there will be a dance, with good music and a fine time assured. Everyone is cordially invited to attend this entertainment. You will enjoy the evening and in addition you will benefit a worthy cause.

Grain Ration Valuable for Fattening Turkeys

Some turkey raisers feed equal parts of wheat and oats during the first part of the fattening season, gradually changing to corn as the weather becomes cooler. The common practice, however, is to begin feeding heavily on corn about November, and since turkeys are not accustomed to such heavy feeding, scours often result, especially if new corn is used. This practice of a sudden start with heavy feeding is to be discouraged. Old corn is a much better feed than new corn, but the old corn must be free from mustiness.

The best results in fattening are obtained when a grain ration of oats, wheat and corn is provided. A number of growers have tried fattening turkeys by confining them to small enclosures during the process, but with very little success. Turkeys confined to a pen usually will eat heartily for two or three days, but afterwards lose their appetites, and, consequently, begin to lose flesh rapidly. On allowing them free range again, they pick up rapidly and are soon eating as heartily as ever, which seems to indicate that a certain amount of range is necessary to keep them in a good, healthy condition so that they are always eager to be fed.

Find Hostess to Pests Makes Poor Egg Layer

A hen cannot feed worms and lay eggs. Poultry infested with worms are thin, droopy and emaciated and walk with an abnormal and stilted gait. On examination four kinds of worms may be found. They are: Large and small round worms, long tapeworms and nodular tapeworms. G. S. Vickers, poultry specialist at the Ohio State university, says.

All of them live in the intestinal tract of the hen. Treatment suggested for round worms is nicotine sulphate. If the hens are heavily infested it is recommended that each bird receive a nicotine sulphate capsule. In other cases 2 per cent of tobacco dust in the dry mash for a month is satisfactory. This should be repeated every other month.

APPEARING AT THE NEW KENDRICK THEATRE TONIGHT AND SATURDAY AND SUNDAY

Miss Barbara Worth, who is playing opposite Reginald Denny in Universal's new picture "Fast and Furious" which will be shown at the New Kendrick, Tonight, and Saturday and Sunday afternoon at 3 o'clock. This is one of the best pictures Denny has made in years. We had this picture booked last fall but by some mistake it failed to arrive and we re-booked it for this week.

Held in Remembrance

The city of Troy, N. Y., the birthplace of the collar, cuff, and shirt industry, was practically the home and for many years was the center of the steam laundry business of the country. So general is the recognition of this fact that the name Troy laundry is still retained by hundreds of laundries in the United States and is even seen abroad.

Black Blotting Paper

By using the blotter that has been applied to a signature, forgers have sometimes fashioned an accurate reproduction of the writing, but with a type of blotter now being employed in banks they will no longer be able to do this, says Popular Mechanics Magazine. The blotters are black, so that the ink is completely lost in the color. Besides this advantage, they are not so easily disfigured.

Prevent Spread of Hog Cholera

Infection May Be Carried
From Contaminated Places
to Clean Yards.

(Prepared by the United States Department
of Agriculture.)

It is positively known that the infection of hog cholera may be carried from contaminated sources to clean premises, from the sick herd to the healthy one. Though some of the means of conveying the disease are still obscure, there are several well-known channels of infection. Against these the swine owners may readily guard in protecting their herds.

The most dangerous factor in the spread of this disease, say veterinary specialists of the United States Department of Agriculture, is the contact of hogs sick with cholera with susceptible hogs, that is, hogs that have not been immunized. Sick hogs should be kept apart from the remainder of the herd and should be well fenced in, thus eliminating the danger of their escaping and mingling with healthy though susceptible hogs. On the other hand farmers should keep all hogs protected against roaming hogs by having hog-tight fences.

Ways Infection Spreads.

The introduction into the herd of

new stock hogs coming from either small local stockyards or from local sales has carried cholera to entire herds in many instances. These small assembling and loading yards become contaminated with cholera and the disease, as a rule, goes with the hogs purchased there. There is the same danger in buying hogs at public sale, as well as in borrowing for breeding purposes and in returning hogs from fairs or other exhibitions. Unless the home herd carries immunity against cholera, new stock hogs brought to the farm should be kept by themselves well removed from the others for at least 21 days. The lending and borrowing of breeding stock should be done with great precaution to avoid the spread of cholera. The failure of swine owners to burn or bury the hogs that die on their premises has resulted in many an outbreak of hog cholera. This is the factor that enables the dog and the buzzard to carry cholera infection to other farms. All diseased animals that die on the farm should be properly disposed of by either burning or burying deeply.

The feeding of table scraps and garbage to nonimmune hogs is a dangerous practice from the standpoint of cholera infection. Such feed may contain trimmings, rind and bones originating from cholera-infected pork, and the virus of the disease may be conveyed to the herd.

The stock-food peddler and the hog buyer going from farm to farm, and from one hog lot or pen to another, are still regarded as potential factors in the carrying of cholera infection. These men go to many places in the course of the day and may tramp through infected premises. There is always a possibility that the virus of cholera may be carried in the mud or manure on shoes, hoofs of horses, and wheels of wagons.

Small streams, brooks and canals, in which cholera-sick hogs wallow become contaminated and the infection carried by the current may attack susceptible hogs having access to these waters. Hogs not immunized should be kept away from such streams.

While other possible means of transmission may be enumerated, those mentioned are considered the chief ones. If these factors are guarded against, much will be done to prevent the spread of cholera and to reduce losses. However, since it is a difficult matter to safeguard against all these dangers, the safe and positive method to follow in sections producing many hogs is that of immunization of the herd. This done as yearly procedure will remove all anxiety as to the safety of the animals. It should not be forgotten, however, that sanitation in the raising of swine has much to do with the health and thriftiness of the herd.

Star's Changing Names

Venus was called Lucifer by the ancients when it was a morning star and Hesperus when an evening star.

POULTRY

COSTS A QUARTER TO SECURE EGGS

Those economists and farmers who say that eggs can be produced in North Carolina for as low as 13 to 15 cents a dozen, don't know what they are talking about, according to Dr. B. F. Kaupp, head of the poultry department of the North Carolina State college.

Doctor Kaupp states that it will cost nearly 25 cents a dozen if all feed costs and overhead costs are added to the totals. He bases his statement on some experiments that he has been conducting with a flock of 750 White Leghorn hens at one of the branch station farms of the North Carolina experiment station.

"Some of the data that I have seen says that it costs the southern farmer only about 13 to 15 cents a dozen to produce eggs," says Doctor Kaupp. "We know that when hens have been bred for high egg production, the cost per dozen eggs is lower, and for that reason it will certainly cost the average farmer more to produce eggs than it will the commercial poultry farmer where the hens are bred for highest production. This commercial man also gives closer attention to his management and feeding than will the average farmer. We have many farmers who are making money with poultry but they are not considering their eggs to cost only 15 cents a dozen to produce."

Doctor Kaupp used the regular North Carolina ration in feeding his test flock of 750 hens. He kept a careful and accurate record of each cent spent for feed, the cost of litter, grit, depreciation of the flock, interest on the investment, the labor, taxes and other charges. Then there were some miscellaneous charges such as for medicines, egg cases, leg bands and the like. He credited the hens for all eggs, for all manure, and for the poultry sold. Each hen returned a net profit above all costs of \$2.40 for the year and the eggs were produced at a cost just a fraction under 25 cents. He found, too, that it took six pounds of feed to produce each dozen eggs.

Early-Hatched Pullets Are Most Profitable

The early-hatched pullets that start to lay in October or November are the ones to keep for profitable egg production. The fall and winter months are the season of high-egg prices and birds that do not come into production until the season has passed will not pay as well as they ought to. It is the early-hatcher and well-matured pullet, with plenty of body weight to give her endurance, that will produce the eggs during this high-priced period.

The early-hatched pullets should be distinguished from the early-maturing pullets. One was hatched early, grew normally, obtaining normal body weight and coming into production at a time when her system was ready for sustained production. The rapidly maturing bird probably was hatched later, but made such rapid sexual development that she is ready to start laying before her body is equipped for sustained production.

Such birds, in direct contrast with the former, are light in weight, are very often poor feeders, and will very likely go into a partial or complete molt before they have produced very many eggs.

Late Molting Hens Take Short Time to Idle

Some hens take fully four times as long a vacation as others to regrow their feathers and prepare for another season of egg-laying. A recent study at the Missouri agricultural experiment station showed that hens ceasing to lay in July took 182 days' vaca-

tion and laid 103 eggs during the year. Those quitting in August took 151 days off to grow new feathers, laying 134 eggs. September quitters lost 143 days and laid 137 eggs. October molters were idle 94 days and laid 153 eggs. Birds laying up to November lost 69 days for molting and laid 171 eggs, while December molters lost only 45 days and laid 174 eggs during the year.

Poultry Notes

Egg-laying demonstrations show that it pays to educate hens.

Delays in making repairs on the poultry houses usually prove expensive.

Damp floors should not be tolerated. Poorly ventilated poultry houses are damp.

Feeding space for all hens at all times is the rule that should be kept in mind in building a poultry feed hopper.

Red mites may be controlled by thoroughly painting the house with cardolineum. Spraying with coal tar dip is also effective.

One should feed comparatively little grain feed in the morning. Probably 8 pounds for 100 hens will be sufficient. There should be kept before the hens all the time a dry mash.

No farm building is really complete until it is painted.

Man can live without milk, but not so well.

Nitrogen in the air is free but the only way that a farmer can gather it is through legumes.

Gooseberries and currants produce fruit from lateral buds on one-year wood and on spurs on older wood.

GIRL TRAPPER

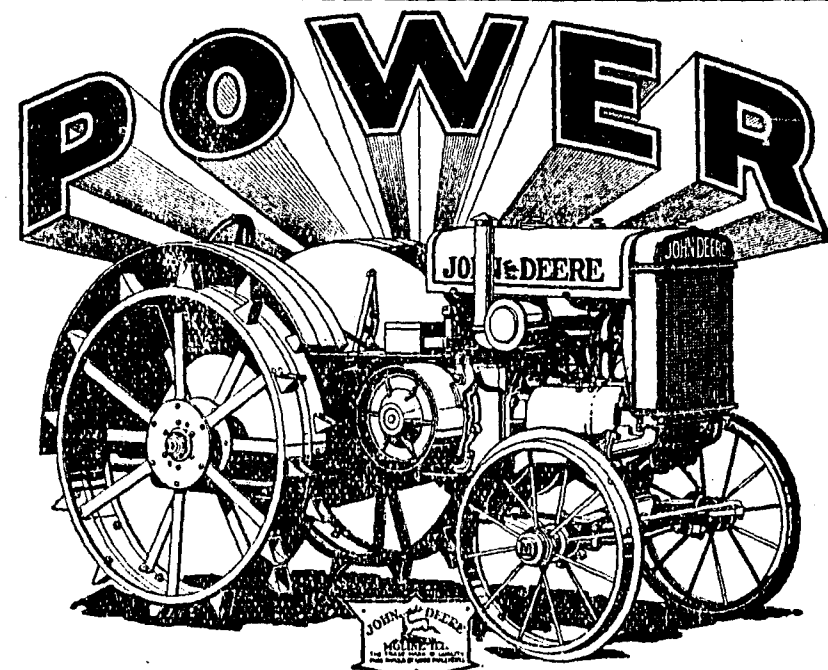

Miss Helen Witzel is the daughter of a farmer near Hatfield, Wis., and has been running a trap line eight miles long in the vicinity of Black river. She has taken many mink, muskrats and weasels thus far this winter, and expects to clear about \$1,200 for the season.

Saves Her Words

Little Josephine, who was in the first grade at school, had the bad habit of saying "huh" every time something was said that she did not understand.

One day when asked whether she said that "sound" at school, she said, "No." Then she looked up and said: "Do you know why I say 'huh' at home? It is because it saves my words to use at school."—Indianapolis News.

You can hardly believe your eyes when you see the work done by the sturdy, compact John Deere Tractor. It out-performs tractors hundreds of pounds heavier and handles your work faster, better and more economically. You get a surprising surplus of power in the

John Deere Tractor

You will be sure to appreciate the advantage of the John Deere for farm work—its great power that permits the use of both field and belt machines of a profitable size.

You will like its light weight—4,000 pounds—which makes it practical for operation on plowed fields and on land that tends to pack—its extreme simplicity that means less repair expense and fewer and easier adjustments.

You operate it at a saving—with less fuel and oil, it does more work in less time. The fewer, but sturdier, working parts are completely enclosed in a dust-proof case and automatically oiled, which means long life.

The remarkable performance of the John Deere and its great economy have led thousands of farmers to see the value of power farming.

Come in and see this better tractor.

POULTRY

EGGS IN WINTER
ARE PROFITABLE

Winter is the very time when eggs are worth the most, when hens want to lay as much or more than they do at any other time, and when they are

not allowed to do so by most poultry-keepers. Folks think there is a great mystery about making hens lay in winter. There is none; anybody can do it; that is, the hens will lay if you let them. They bear a good deal of cold in the sunshine, and even freeze their combs and toes, and yet will not stop laying altogether if they can sleep warm.

They are warm themselves, and usually only need to be crowded on their roosts, with the roosts all on one level. The ceiling of the roosting room should be only a few feet above the fowls' heads, and provided with ventilation from the floor if possible. Give them very close quarters, with

no draughts of cold air, and clean but under the roosts every morning. The combs will then redden up, and eggs will be plenty on less feed than usual. It must not be corn, however, or only a small percentage of it, for this will make them too fat to lay well if they sleep warm.

A good way to arrange a hen house for winter is to make a ceiling of rails about six feet above the floor, covering the rails with hay, or coarse swamp hay of any kind. The roosts should be about three feet high above the floor, and movable, so that they may be kept perfectly clean. For small flocks of 30 to 50 hens, it is little trouble to take the roosts down

every morning when the floor is cleaned, and replace them at night. It removes from lazy fowls the temptation to sit in idleness on the roost for half the day.

Keep Chickens in Good Health by Giving Oats

One of the best ways to keep chickens in good health is to feed green food. It acts as a regulator, keeping the bowels open. Sprouted oats are as good a source of green food as anything, when fed, roots and all, to the layers once a day as much as the birds will clean up in about half an hour.

The oats are soaked for 24 hours in warm water, that is, slightly warmer than room temperature. They are then spread in trays of any convenient size to a depth of about one and one-half inches and allowed to sprout until the green sprouts are about three inches long, at which time they are fed. If the oats can be kept at a temperature of about 70 degrees, the sprouting will be more satisfactory than if the room is cool. To prevent the oats from becoming moldy, wash and disinfect the trays when they are emptied after each sprouting. Three or four drops of formalin may be put in each pail of water used for soaking the oats before they are spread on the trays.

Sometimes the oats are allowed only to germinate, that is, they are soaked in water as for sprouting and are spread on the trays but are not permitted to sprout to the extent described above. They are fed when the sprouts show a length of only one-fourth inch. They are not green. These germinated oats are frequently mixed in the mash and fed.

Metal Bands Are Useful in Culling Hen Flock

In order to systematically cull the poultry flock, one should know how old the hens are. All two-year hens ought to be sold, with the exception of those to be used for breeders. This is especially true of the general purpose and heavier breeds. If the pullets are marked with some kind of a metal band, one will have no chance for guesswork.

Special sealed bands may be secured for the purpose or ordinary round hog rings may be used. The advantage of the regular bands lies in the fact that each hen can be identified. If the bands are put on the left leg one year and on the right leg the next year, one has an accurate mark by which he can tell the age of the hens.

Sand Is Essential

Sand is essential for hens to supply grit, but not for dusting material. Even fine sand would not be dusty enough to do any good from the standpoint of a dust bath. Hens dust themselves in order to keep lice under control and their feathers in good condition. The fine dust gets into the breathing pores of the lice, thereby exterminating them. Supply the hens with a good-quality dust and then give them sharp sand so that they can pick up the grit.

Hen to Keep

The kind of a hen to keep is one that is strong and vigorous with a short, neat head and a strong beak. She has a long, deep, rectangular body, the top and bottom lines of which are parallel. She has large bright eyes, is active and has short, well-worn toe nails. She isn't much for appearance, but has a bright, healthy look. She molts late and rapidly; is noisy, happy and friendly. She retires late and is off the roost with the break of day.

Lice and Mites Hurt Egg Yield

These Two Poultry Parasites Require Different Treatment to Kill.

(Prepared by the United States Department of Agriculture.)

Poultry parasites are of many kinds. Sometimes they multiply until they kill the fowls on which they prey. But in the opinion of entomologists of the United States Department of Agriculture parasites do even greater injury to the industry by reducing the vitality, stunting the growth, and checking the egg yield of fowls. Lice and mites are the most frequent and widespread groups of external parasites, and these two require entirely different methods of treatment to rid the fowls of their attacks, because the two live under different conditions. The lice exist on the fowls, and the mites live in cracks and crevices in nests and roosts.

Eradicating Lice.
For eradicating lice the Department of Agriculture recommends application of sodium fluoride. It kills all varieties of lice—body, head, and feather. This chemical may be applied by dusting or by dipping. Either the "chemically pure" or the "commercial" grades may be used, but the latter is cheaper and more easily obtained. Young chicks require very little, and a pound of powder costing about 50 cents should kill the lice on a flock of 100 chickens. Dipping the fowls is still easier and cheaper, but it is not wise to dip fowls unless the weather is warm. A single treatment of every fowl, by either the dusting or dipping method, will completely eradicate all lice from the premises.

Destroying Mites.

For mites the procedure is as follows:

Mites do not live on the fowls by day, but come out and suck their fill of blood when the fowls are roosting. First the poultry house must be cleaned thoroughly. Trash, nesting material, etc., should be taken out and burned. Then go over the whole house thoroughly with crude petroleum or carbolineum, using either a spray pump or brush to apply the material. Petroleum is cheaper but the carbolineum gets into the cracks better and lasts longer. Paint the roosts and let the petroleum or carbolineum work into every crack. The mite killer should dry before the chickens go to roost.

There are other fowl parasites, such as the scaly leg mites, blue bugs, bed-bugs, fleas, and chiggers, each of which may cause much loss; these pests, however, are not so generally distributed as are the lice and mites. This general distribution over the entire United States and the pernicious attacks of mites and lice make these two groups of outstanding importance.

Roup Usually Starts as a Cold During Winter

One of the common troubles with poultry in the fall and winter is a disease known as roup. It usually starts as a cold with a watery discharge from the eyes or nostrils. In this form, it is commonly called a cold. The trouble may be nothing more than a cold, in which case it will soon clear up and disappear.

If, however, roup is really present, the eyes—one or both—will swell and

will be filled with a heavy mucus which may even be so thick it is cheesy. The bird will stand hunched up and will have no desire to do anything. There will be a foul odor from the discharge. This is roup.

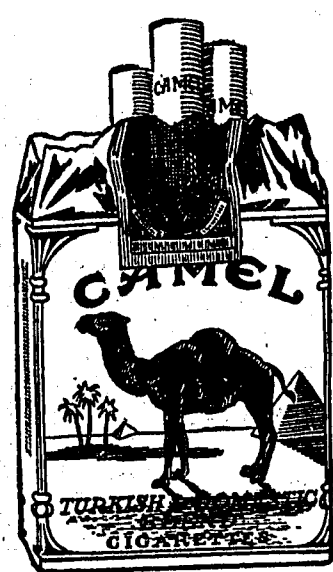

Keeping the birds warm is one of the best treatments for this trouble. Take all birds thus affected to a warm building or room—if one is available with a stove in it, so much the better. Squeeze as much of the cheesy material from the eyes as possible and treat the eyes with a warm 5 per cent solution of boric acid or with a 2 per cent solution of some good disinfectant. A 20 per cent argyrol solution is also good for this. Remove any birds from the pen as soon as any other cases are discovered.

Insect Gardeners

White ants of Indo-China have their own gardens, where they tend what might be called pumpkin patches. These insect gardeners raise microscopic pellets like pumpkins, made of a sort of fungus, somewhat similar to the mold on stale bread. A bed consisting of fragments of leaves and grass is prepared and weeded by the ants. These they chew into fine material into which they place the germs of fungus.

Remarkable Surveying

Government surveyors have run a level across the United States with an error of no more than one-tenth of a foot.

Deering Tractor
NOW
for Many Years of
Successful
Power Farming!

Bird's-eye view of the 3-plow tractor

POWER FARMING with the McCormick-Deering Tractor is more pleasant. The chore requirements of a tractor are less than those of horses and more agreeable. A tractor needs attention, but only a fractional part of that required by horses for the same work.

A tractor operator controls more power, enabling him to do more work in a given length of time than can be done with horses. Field days can be made longer when emergencies arise—the tractor

does not tire and chore time is eliminated.

Triple-Power Tractor

The McCormick-Deering Tractor combines all farm power units in one, whether it is drawbar, belt, or power take-off work; thus one power unit does all the work. Come in Now and investigate McCormick-Deering power farming. You can reduce your overhead and increase profits by becoming a McCormick-Deering Tractor farmer now.

POULTRY

MILK FEEDING IS CONSIDERED GOOD

Most milk feeding of poultry is considered a good thing and a money-maker if people have a little time in the fall, and are close enough to a town where the hotels or meat markets will buy the fowls at a special price. These people plan to have the springs and younger cockerels grow up with good-sized bones, and usually feed them up a few weeks before Thanksgiving. Young birds weighing from 3 1/2 to 4 1/2 pounds are the best, as they make tender meat and take on flesh quickly.

Pen fattening is the best way of feeding them on the farm. The birds are placed in a coop where they will not exercise much, and the change in food is made gradually for two or three days. The following ration is recommended as giving good results:

2 pounds ground corn
1 pound ground whole oats
1 pound flour middlings
8 pounds liquid buttermilk

This is mixed just before each meal, using skim milk if there is no buttermilk available. When fed it looks like pancake batter. Feed in troughs twice each day, and leave only enough before them so that they will clean it up in ten minutes for the first few days. If they are not hungry, do not force the feeding. It takes about eight pounds of feed for one pound of gain per chicken in fourteen days. Sometimes it pays to stop in ten to twelve days, if they are not gaining rapidly enough.

Look up last year's garden plan and study it for improvements.

Plan your plantings so all your work won't come at the same time.

Sweet clover seed should not be sown too late in the spring or it may not give a good stand.

Look over the lists of new garden tools. They turn out new and more efficient tools every year.

Time spent selecting and testing seed corn will pay the farmer many dollars per hour for his labor.

Early potatoes may be secured by early planting of early varieties in deep, rich, warm soil, followed by thorough cultivation or mulching with straw.

DADY TAE DAIRY

DOMESTIC BULL MOST DANGEROUS

A big game hunter on returning from Africa said that the most dangerous animal in the world was not the lion or the tiger, but the farmer's domestic bull. An Eastern farm journal for many months has been editorially mentioning fatal experiences of farmers with bulls and in nearly every issue the name of some farmer is recorded who has lost his life through placing too much trust in the herd sire.

There are few neighborhoods in which one or more farmers have not been killed by bulls in the last 20 years, and many hearing scars of attacks which through some miracle did not result in death, says a writer in the Michigan Farmer. It is the gentle bull which usually becomes enraged and attacks its owner. A farmer who works around a docile bull for many months may become careless and forget the tremendous power of that animal which with the powerful head and shoulders can easily crush a man in spite of every effort to fight back.

A few months ago we visited a prominent Holstein breeder who entered the box stall of his herd bull with the animal on a stout metal staff. The bull charged the owner but by piling the staff in the corner of the stall he was able to keep the animal braced away until help arrived. It proved the value of keeping the bull on a staff when fed.

At the Michigan state college and on farms where bulls have metal and concrete staffs and exercise yards there are few fatalities. But herd bulls in pastures and ordinary barnyards are a constant menace. This is true also when feeding them and cleaning their stalls. Every moment one's attention is taken from the animal there is danger of being knocked down and trampled. Farming is a hazardous business if carelessness prevails in looking after the bull.

Silage Without Tramping Is Favored by Wisconsin

Make silos higher and do away with tramping the silage—maybe that's what we will be doing in a few years.

A few years ago a silo at the University of Wisconsin farm was filled without tramping, and the silage kept in such good shape that since then all have been filled in that way. One or more sections of distributor pipe are used and a man at the top distributes the silage.

The silage settles more if not tramped, but more silage can be run in as soon as it settles—a common practice even where tramping is practiced.

In view of these facts, why not build the silo a little higher and save the extra labor of tramping? Besides, engineering experts say it takes less power to fill a high silo than a low one, strange as that may seem.

Along with this goes the fact that a great many silage cutters are being run too fast. By reducing the speed somewhat, a larger pulley can be put on and smaller engines or tractors used to run the cutters. Lower speed makes the machinery last longer.

Fly wheel cutters less than 11 inches in diameter are not economical. Better results come from a medium-sized machine at comparatively slower speed.

New York College Gives Plans for Ventilation

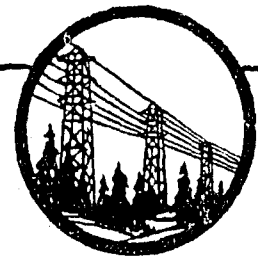

Carefully conducted studies made by the New York State College of Agriculture during two months of each of the past five winters show that the walls and ceilings of dairy stables, as well as the lofts of dairy barns can be kept dry by proper ventilation. It has been found, also, that ventilation can be accomplished with less material, less labor, and at less cost than was formerly supposed, according to A. M. Goodman at the New York State College of Agriculture at Ithaca, N. Y.

Most dairy barns need only one good chimney or out-take flue; few of them need more than two. The construction of the chimney is the greatest expense of the whole installation. The part of these chimneys that goes from the floor of the mow to the eaves of the barn must be built while the mows are empty. The upper part of the chimneys and, in fact, all the rest of the system may be put in when the loft is full, he says.

By building the upper part of the out-take flue when the mows are full, no high climbing is necessary and practically no scaffolding is needed, but it should be remembered that part of the out-take flues must be built before hay is put in the mows or while the mows are empty.

Barn Space for Cow

The cubic space allowance per cow is not the most important thing in a barn. Proper ventilation is of much more importance than the number of cubic feet of air allowed per cow. However, 600 to 800 cubic feet of air space should be provided for each cow, and in addition an efficient ventilating system must be provided. The recommended cross-sectional area of outlet flues is 30 square inches per cow, and a somewhat greater total area is required in the intake flue.

Looking Ahead —and Ready

"In your development of cheap power you have added immeasurably to the wealth of the nation; and it is not old wealth taken from others by the process of trade, but new wealth wrung from the treasure house of nature."

HON. ALBERT C. RITCHIE
Governor of Maryland

DEVELOPMENT of the water power resources of the Northwest is a public service. Electricity is created, which is the most useful force the world has ever known. New wealth is generated at the power house, which in turn assists to grow or manufacture even more wealth.

This company is constantly planning and looking ahead to insure an abundance of reliable power, which is so essential to the healthy, continuous growth of the many communities which it serves.

The Cream of the Tobacco Crop

"I Appreciate
Lucky Strike"
Says George
M. Cohan
America's Stage
Favorite

"Good old Luckies!
We've been pals for
years. And like an old
friend they treat me
well. No irritation to
my throat and no
coughing. And I ap-
preciate Lucky Strike
—the full body tobacco
with the toasted
flavor that's been the
same since that day
we met."

My ambition

"It's toasted"

No Throat Irritation—No Cough.

LOCAL NEWS

Rev. Lanphere went to Spokane, Tuesday, on business.

Jake Grinolds of Lewiston was transacting business in Kendrick, Wednesday.

Born to Mr. and Mrs. O. E. MacPherson, Saturday, March 10, a 9½ pound son. His name is Jerrold Edward.

Directories for the Potlatch Telephone Co. are being printed in the Gazette office this week and will be ready for distribution in a few days.

Othar Thomas returned the first of the week from Spokane to visit his mother.

Al McKee of Lapwai was a Kendrick visitor last Saturday.

Walter Thomas was transacting business in Lewiston last Monday morning.

H. A. Russell of Clarkston was transacting business here the first of the week.

R. H. Ramey went to Spokane Tuesday morning on business. From there he will go to Creston for a brief visit with friends. He expects to return the first of next week.

Henry Brammer of Southwick was a Lewiston visitor yesterday.

Mrs. William J. Whiting

Eldora Lyons was born in Illinois, January 17, 1862. She passed away March 9, 1928, at the age of 66 years, one month and 22 days. She was married to William J. Whiting, June 27, 1880, in Iowa. To this union seven children were born, two having died, the eldest boy, Lee, at the age of 9 years and the youngest girl, Nina, in infancy. Mrs. Whiting is survived by her husband, 2 daughters, Mrs. Mallie Henderson and Mrs. Lina Thornton; 3 sons, Fred, Vester and Harold, all of Southwick; also 17 grandchildren and 2 great-grandchildren; three sisters, Mrs. J. E. Kemmish of Persia, Iowa, Mrs. Anna Adams of Dunlap, Iowa and Mrs. W. E. Thomas of Neola, Iowa.

Mrs. Whiting had been a member of the Methodist Episcopal church and a devoted Christian for many years. She was a loving wife and mother and a devoted friend to all who knew her. She moved from Iowa to Idaho, with her husband, in 1886, settling in the Southwick community which was her home until death came.

Services were held at the Southwick Methodist church, Sunday, Rev. William Berriman officiating. The body was laid to rest in the Southwick cemetery.

The members of the bereaved family have the sympathy of the entire community in their loss.

Cameron News

Mr. and Mrs. Otto Schoeffler arrived Thursday, March 8, from Marshfield, Oregon. They will take charge of the Dave Schoeffler farm.

Mrs. Amelia Teats was an arrival Friday, March 9, from Wardner, Idaho, for an extended visit with her brother, Fred Silflow, Sr.

Rev. Rein has traded his old car in on a Dodge sedan.

Mrs. Gus Kruger entertained Mesdames A. O. Wegner, Fred Silflow, Sr., Amelia Teats, Henry Wendt, Grandma Wegner and Fred Silflow, Jr. at a quilting party Monday.

George Ehlers, Rev. Rein, Albert Schultz, Geo. Wegner and Mesdames Spekter and Henry were business visitors in Kendrick Friday.

G. F. Criddlebaugh and W. R. Smith of Southwick drove to Lewiston Saturday morning. They returned late Sunday evening. On account of the high waters between Juliaetta and Kendrick, they were forced to detour from Juliaetta to Kendrick via Leland. It took six hours to make the trip on account of the bad condition of the roads west of Leland.

Mrs. Fred Mielke entertained Mesdames Fred Newman, John Schwartz, Ida Stoneburner and Miss Emma Hartung, Tuesday.

Ye olde fashioned quilting bee seems to be very popular this time of the year. Mrs. Blum entertained the following at one last Tuesday: Mesdames, Fred Silflow, Jr., Marvin Albright, W.

F. Albright, Houck Rein and the Misses Laura and Minnie Blum. After a bounteous dinner, quilting was resumed. Leland Houck, Clay Albright, Mrs. Biddison, Wilbert Brunseik and Walter Silflow were evening guests. All reported a good time.

N. P. Agricultural Agent

Taking Cognizance of a revival of interest in the farming business of the Inland Empire country, J. W. Haw, director of the agricultural development department of the Northern Pacific Railway, announced today that he has assigned W. P. Stapleton, agricultural development agent, to the Spokane territory with headquarters at Spokane. He is to have charge of the activities of that department of the railroad in northern Idaho and eastern Washington.

Mr. Stapleton, who is a thoroughly trained and experienced agriculturist, for four years has been in the service of the department in eastern and central Montana. Before joining the staff of the railroad, he was for many years a successful county agent in Hill County at Havre and in Yellowstone at Billings. He was born and reared on a farm near Fargo, N. D., and is a graduate of the North Dakota Agricultural College.

Southwick News

A number of high school pupils and neighbors surprised Walter Meyer last Wednesday evening, the occasion being his birthday.

Mr. and Mrs. Jake Newman spent Sunday evening at the home of Henry Brammer.

Mrs. Henry Meyer, who has been visiting the past month or two with her daughter, Mrs. Brammer, has gone to visit her son, Herman of Leland.

R. G. Farris left last Friday for Boise to visit his brother, who is seriously ill.

Mr. McClelland had the misfortune of being kicked by a horse last Wednesday. While there are no bones broken he is unable to move about.

John Phillips and family and Clarence Hewitt and family spent Sunday at the home of Harland Hewitt.

Mrs. Rogers and daughter spent Tuesday at the home of Mrs. Jake Berriman.

Henry Brammer, who has been suffering with an abscess in his ear, is reported better at this writing.

A number of men in and around Southwick attended the horse sale at Kendrick Tuesday.

Chester McIver and father drove to Lewiston last Tuesday. Chester returned home the same day, but Mr. McIver will remain there for some time.

Ruby McCoy and Maxine

Phillips spent the week end at the home of Floyd Russell.

Mrs. Garlinghouse, who has been visiting at the home of her father, George Jones, for the past two weeks, left last Thursday for her home in Lewiston.

Elton McCoy and wife visited with Jim Cook and wife of Bed Rock from Thursday until Saturday.

Johnny couldn't understand the theory of evolution, so he questioned his mother.

"Mamma, am I descended from a monkey?"

"I don't know, my boy," she replied. "I never knew any of your father's people.—Tade Topics.

A TEN POUND SON

Born to Mr. and Mrs. Boyd Cook, Thursday, March 15, a 10 pound son.

KENDRICK STORE CO.

"The Quality Store"

Trapped by Catnip

It is not the purring house cat alone that is irresistibly attracted by the smell of that strange drug, catnip. The spell runs through the entire family, according to the American Drug gist, which reports that a compound of artificial catnip is being used effectively to trap the bobcats and mountain lions that infest the far-western mountain regions.

Ask the Night Watchman

George Matthew Adams says: "Live the first hour of the day aright and the other hours will take care of them selves." The theory sounds all right but we shall have to ask the milkman about it.—Toledo Blade.

Many Contract Rabies

Horses, sheep, goats, dogs, chickens and animals of prey such as wolves, foxes, badgers and martens also contract rabies when bitten by rabid animals, and behave quite similar to rabid dogs, cattle and cats.
